¹Please direct any correspondence about this report to Dr. Veronica Dahir at roni@unr.nevada.edu or 775-784-6718.

²Please direct any questions about the data analysis to Dr. Wei Yang at weiyang@unr.edu or 775-682-1094.

ACKNOWLEDGEMENTS

We would like to thank Christopher Sanchez, Survey Lab Manager, for the management of the data collection and Martha Rodriguez, Graduate Student and Assistant Survey Manager, for the supervision of the data collection process and creating the training materials. We would also like to thank Carlene Gonzalez, M.S., Victoria Springer, M.A., and Adrienne Leipold for their assistance with the creation of this report. Additionally, we would also like to thank all of the survey lab interviewers and supervisors at the Center for Research Design and Analysis for their hard work in the data collection process.

We would like to acknowledge the role of the following co-author: Wai "William" Lee for his role in the programming of all of the data tables in the Appendix and data analysis. Additionally, we would like to thank Javier Garcia, IT Technician II, for programming the survey instruments, developing the website for the project, and aiding with data management and methodology.

Finally, we would like to thank William "Bill" Hoffman from NDOT Maintenance for his guidance, help with survey development, and collaborative efforts throughout the project.

Executive Summary

The Center for Research Design and Analysis (CRDA) at the University of Nevada, Reno conducted a customer satisfaction RDD (Random Digit Dialing) telephone survey of Nevada drivers on behalf of the Nevada Department of Transportation (NDOT) Maintenance Office. Data collection took place between October 2008 and August 2009.

Nevada household residents were randomly selected to participate in the survey and were screened to determine their eligibility to participate. All respondents were over the age of 18 and must have *driven* a motor vehicle in the past month. Bicyclists, pedestrians, and those who took only public transportation within the past month at the time of their interview were not eligible for the study. There were 151 Nevada residents contacted that were deemed ineligible because they were not at least 18 years old or because they were not recent drivers of a motor vehicle. A total of 1,013 interviews (985 complete and 28 partial) were completed. The survey achieved an overall cooperation rate of 35%.

Post-stratification weighting was used to make the responses from the sample better reflect the entire population of Nevada adults. During analyses, weights were applied so that the responses from each group (i.e., district, age, gender) were represented in the overall results, in proportion to their real size in Nevada's population (see Appendix A).

The survey instrument was developed by CRDA in conjunction with NDOT, and consisted of six sections: assessment of NDOT Maintenance activities, customer service use and satisfaction, local area congestion, truck driver's experiences, rest area use and satisfaction, and demographics (see Appendix B). The average length of each interview was 11.8 minutes in total.

A website was created by CRDA that provided general information about NDOT Maintenance and CRDA and provided answers to frequently asked questions (FAQs) by the Nevada public (see Appendix C).

Figures are located within the text of the report, and all Tables not located in the body of the text are located in Appendix D.

All major and most frequently traveled highways and roads maintained by NDOT within each district were selected as the target roads and highways of interest for this study. Please see Appendix E and F, respectively, for a map of NDOT maintenance districts and highways and roads located within each district.

The vast majority of Nevada adults (73%) reside in NDOT District 1 (i.e., Clark, Esmeralda, Nye, and Lincoln counties), with smaller numbers (24%) residing in District 2 (i.e., Carson City and Washoe, Churchill, Douglas, Lyon, Pershing, Mineral, and Storey counties) and District 3

(3%; i.e., Elko, Humboldt, Lander, Eureka, and White Pine). Additionally, the vast majority of Nevada adults reside in either Clark (66%) or Washoe counties (15%). Roughly equal numbers of men (51%) and women (49%) reside in Nevada and the largest percentage of adults are between the ages of 25 and 44 (39%).

Nevadans in District 1 reported travelling most frequently on US 95 (55%) and Interstate 15 (32%). In District 2, Nevadans travelled US 395 (56%) and Interstate 80 (18%) most frequently, while in District 3, Nevadans traveled Interstate 80 (48%) and State Route 227 (Lamoille Highway; 16%) most often.

Respondents were asked several questions to assess their opinions of the performance of NDOT in maintaining the Nevada State Highway or road that they traveled on *most often* on a *monthly* basis. Overall, the majority of Nevadans indicated that NDOT's performance of maintenance activities was good or excellent.

For the following maintenance activities, Nevadans reported NDOT's performance as good or excellent: 1) landscaping at interchanges and bridges (75%); 2) removal of graffiti (73%); 3) removal of debris, including litter and garbage (71%); and 4) snow removal and ice control from the roadways (70%).

Although almost two-thirds of Nevadans reported NDOT's performance as good or excellent with respect to maintenance of visible lane lines on the pavement and the roadway surface they were a little less positive about these two activities compared to those above. While just over 65% indicated that NDOT's maintenance of the visible lane lines was good or excellent, almost one-fourth (24%) also indicated that it was only fair, and 10% indicated that it was poor. Similarly, just over 65% of Nevadans reported that NDOT's performance in maintaining the roadway surface of the state highway or road that they traveled on most often was good or excellent, but 27% indicated that it was only fair, and 7% indicated it was poor.

A very small percentage of Nevada adults (3%) have contacted or attempted to contact an NDOT employee either in person, by letter, telephone or email, and Nevadans in District 3 were more likely than those in District 1 or 2 to have contacted or attempted to contact an NDOT employee. However, 89% of those who did contact or attempted to contact NDOT were able to get the information that they needed, and 96% of these individuals reported that they received the needed information in a timely manner.

While Nevada residents in all three districts preferred to see electronic message boards as a means of notification for current roadway conditions, those in Districts 1 and 2 chose TV as their second option while those in District 3 chose a toll-free phone number as their second preferred method of communication for roadway conditions.

Respondents were asked what *one* thing NDOT can do to improve its level of customer

service. Common responses included: 1) improving communication with users/customers and 2) be more accessible to the public. Many Nevadans responded to this question by suggesting ways in which NDOT could improve road construction or help customers directly.

While most questions on the survey asked respondents about the highway or road they traveled *most often*, they also were asked a few questions about their opinions regarding the factors that contribute to delayed travel times on *any* Nevada street or highway they travel on in their city or town. Nevadans indicated that the three biggest contributors to delayed travel times in their city or town were: 1) construction (35%); 2) poor signal timing on local roads (21%); and 3) not enough travel lanes to accommodate traffic (19%).

District 1 indicated that construction was the biggest contributor to delayed travel times (42%), whereas 30% of Nevadans in District 2 stated that it was poor signal timing. In contrast, 26% of Nevadans in District 3 blamed the winter and stormy conditions most for the delays.

Only 5% of Nevada drivers are truck drivers or professional long-distance drivers. Of these, 46% spend 6-7 days a week on Nevada highways and 41% travel Nevada highways one to five days a week.

Only 28% of Nevadans reported using a Nevada Highway rest area in the past year and of those 71% that have not stopped in the past year, the most frequent responses as to why they did not include: 1) a preference for stopping where food or gas can be purchased (68%); 2) no rest area along their route (47%); 3) not feeling safe (26%); and 4) a belief that the facilities were not clean or well kept (23%).

The top three maintenance activities that should be the highest priority for NDOT, according to Nevada residents in all three districts, are: 1) maintenance of the roadway surface (39%); 2) maintenance of visible lane lines on the pavement (20%); and 3) removal of litter and garbage along the roadways (14%). However, these priorities also varied by district.

Nevadans in District 1 indicated that maintaining roadway surfaces (39%) and maintaining visible lane lines on the pavement (22%) should be NDOT's number one and two priorities, respectively. In comparison, those who reside in District 2 indicated that maintaining roadway surfaces (42%) and snow removal and ice control (24%) should be the number one and two priorities, respectively. In contrast, Nevadans in District 3 indicated that snow removal and ice control (44%) and maintaining roadway surfaces (34%) should be the number one and two priorities, respectively.

Introduction

A telephone survey was conducted by the Center for Research Design and Analysis (herein referred to as the “Center” or “CRDA”) to assess customer satisfaction with the services provided by the Nevada Department of Transportation Maintenance Office (herein referred to as “NDOT Maintenance”). Data collection began in October, 2008 and ended in August, 2009.

Methodology

Sample

Nevada household residents were randomly selected to participate in the telephone survey and were screened to determine their eligibility to participate. All respondents were over the age of 18 and must have *driven* a motor vehicle in the past month. Bicyclists, pedestrians, and those who took only public transportation within the past month at the time of their interview were not eligible for the study. There were 151 Nevada residents contacted that were deemed ineligible because they were not at least 18 years old or because they were not recent drivers of a motor vehicle. Another 24 residents were unable to participate due to a language barrier. Of the 10,567 numbers in the original sampling frame, 5,252 were not released for calling because they were pre-identified as nonworking or nonresidential or were numbers that were previously placed on an internal do not call list. Of the 5,315 phone numbers that were called, 2,249 were never reached (e.g., answering machine, ring-no-answer, busy) or were ineligible. Therefore, 2,886 phone numbers out of 5,315 were actually reached, and of those 2886, 1,161 refused to participate and 1,725 initially cooperated. Of those 1,725, 707 were contacted but never agreed nor refused to participate by the time data collection concluded, and 1,018 agreed to participate. Of the 1,018 that agreed to participate, five participants were dropped from the study because they answered fewer than five questions, while the 1,013 who answered five or more questions were retained for data analysis. Of the 1,013 respondents who answered at least five questions, 985 gave complete interviews and 28 gave partial interviews. Thus, an overall cooperation rate of 35% was achieved (1013/2886).

Instrument

The survey instrument consisted of six sections: assessment of NDOT Maintenance activities, customer service use and satisfaction, local area congestion, truck driver’s experiences, rest area use and satisfaction, and demographics (see Appendix B). The survey instrument was developed conjointly by NDOT Maintenance and CRDA. The average length of each interview was 11.8 minutes in total.

Data Collection Procedures

Interviews were administered from CRDA's survey research lab located at the University of Nevada, Reno (UNR), via a computer assisted telephone interviewing (CATI) system. Interviews were only conducted in English. Experienced telephone interviewers were trained on how to administer the survey instrument prior to data collection. In the course of a CATI interview, the interviewer read questions verbatim from a computer screen and recorded respondent's responses via keyboard entry. The CATI system automatically stores data on CRDA's secure server. Data was also securely stored on one of UNR's Computer Information System servers.

Each sampled respondent was contacted by CRDA on up to eight occasions, until the interview was completed or until the respondent gave two "soft" refusals or one "hard" refusal (i.e., respondent strongly refused to participate)¹. On the 4th and 8th call attempts, interviewers left messages on answering machines with the Center's 1-800 number along with a website address <http://www.crda.unr.edu/NDOTstudy/>. The CRDA phone number was given so that respondents could complete the interview at a time more convenient for them. The CRDA website was given so that respondents could review the purpose of the study and answers to frequently asked questions. The website also provided general information about NDOT Maintenance and CRDA (see Appendix C).

Refusal conversion strategies included the following: (1) use of a standardized, detailed description of the importance of the study; (2) an appeal to the respondent regarding the importance of participation as means of preserving the reliability of the data being collected, including the importance of their needs being recognized and represented; (3) an effort to establish the personal benefit which will accrue to respondent based on participation; (4) a clear reassurance of respondent confidentiality; and (5) an explanation of how they were selected for the study. Our attempts to avoid refusals included leaving messages on answering machines as stated above and preprogrammed scheduling of re-call attempts for "ring no answers".

Weighting Methodology

Post-stratification weighting was used to make the responses from the sample better reflect the entire population of Nevada adults. During analyses, weights were applied so that the responses from each group (i.e., district, age, gender) were represented in the overall results,

¹A "soft" refusal is considered one in which the informant (the person that answered the phone) or the respondent, seemed interested in participating but the interviewer just called at an inconvenient time (e.g., "We're in the middle of dinner," "I was just running out the door.") A "hard" refusal is a call where the informant or the respondent is rude to the interviewer, uses profanity, or says something like, "Take me off your list!" or "Don't ever call back!"

in proportion with their real size in the population. This strategy corrects for inaccurate conclusions that can be drawn if the survey over-represented some groups, while under-representing others. Detailed information regarding the weighting methodology is provided in Appendix A. All tables listed in the report indicate confidence intervals (C.I.), the unweighted sample response frequency ("N"), and the weighted prevalence rates in percentages (%)². Throughout the text of this report, all results mentioned refer to the weighted analyses, unless otherwise stated.

All figures are located within the text of the report, and all tables referenced that are not located within the main body of the report are located in Appendix D.

²For all tables:

- C.I. = Confidence Interval. The points (range) between which the true population parameter (population estimate) will fall 95% of the time, if statistical assumptions regarding sampling are met. Essentially, this means that 95% of the time, true scores will fall within this range. See Appendix A for a more detailed description of confidence intervals.
- "N"= sample response frequency (unweighted)
- "%"= weighted prevalence rates

Results

All results are illustrated in tables in Appendix D of this report. It is suggested that the reader consult the tables for further detail or clarification. As stated previously, all results mentioned in this section of the text refer to the weighted analyses and can be used to generalize to the entire Nevada adult population.

Respondent Characteristics

The vast majority of Nevada adults (73%) reside in NDOT District 1 (i.e., Clark, Esmeralda, Nye, and Lincoln counties), with smaller numbers (24%) residing in District 2 (i.e., Carson City and Washoe, Churchill, Douglas, Lyon, Pershing, Mineral, and Storey counties) and District 3 (3%; i.e., Elko, Humboldt, Lander, Eureka, and White Pine). See Figure 1, Table A [p. 43] in Appendix D, and NDOT District Map in Appendix E. Additionally, the vast majority of Nevada adults reside in either Clark (66%) or Washoe counties (15%; see Figure 2 and Table A). Roughly equal numbers of men (51%) and women (49%) reside in Nevada and the largest percentage of adults are between the ages of 25 and 44 (39%). See Table 1 on the next page or Table B in Appendix D for a complete listing of the distribution of district, gender, and age for both the Nevada adult population and respondent sample.

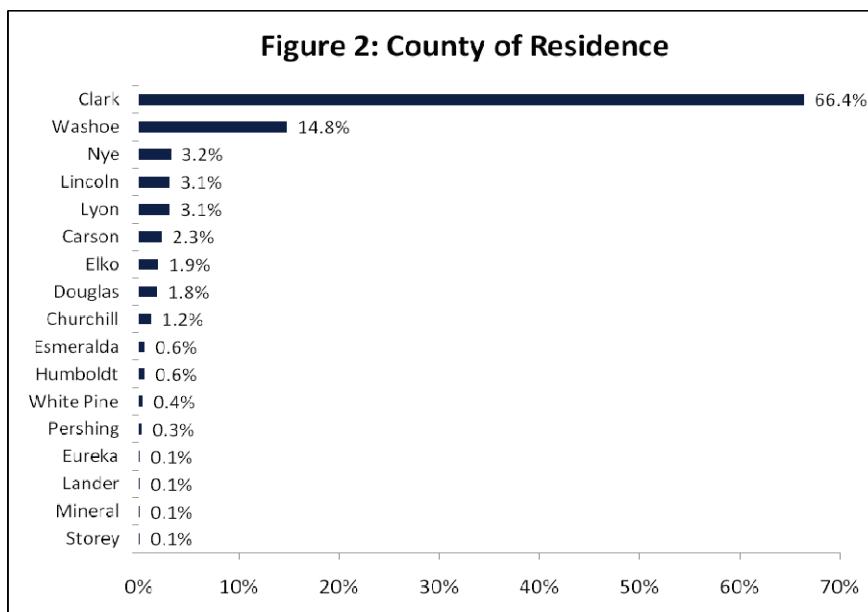

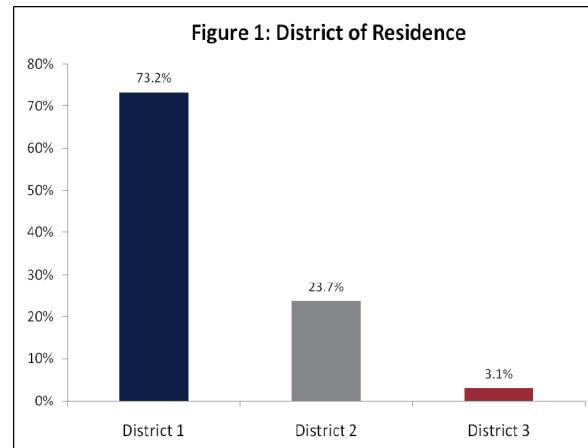

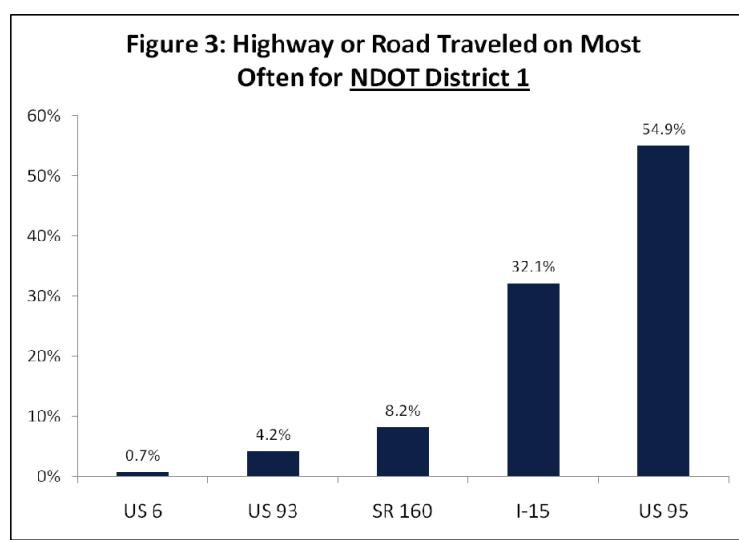

Table 1: District, Gender, and Age Characteristics of the Adult Nevada Population and Respondent Sample

			NV Adult Population		NDOT Sample			Weighted Sample	
			Frequency	Percent	Frequency	Adjusted Frequency	Adjusted Percent	Frequency	Percent

	Total		1,877,261		1,013	2,026		1,877,261	

Respondents were given a list of Nevada State Highways or roads and were asked which highway or road they travel on most often on a monthly basis (see Table C). Highway and road response options varied by District of residence (see Appendix F) and were specifically selected by NDOT and CRDA based on traffic volume in each NDOT District. Of the highways provided to respondents, Nevadans in District 1 reported travelling most frequently on US 95 (55%) and Interstate 15 (32%; see Figure 3 and Table D). In District 2, Nevadans travelled US 395 (56%) and Interstate 80 (19%) most frequently (see Figure 4 on next page and Table E). In District 3, Nevadans traveled Interstate 80 (48%) and State Route

227 (Lamoille Highway; 16%) most often (see Figure 5 and Table F).

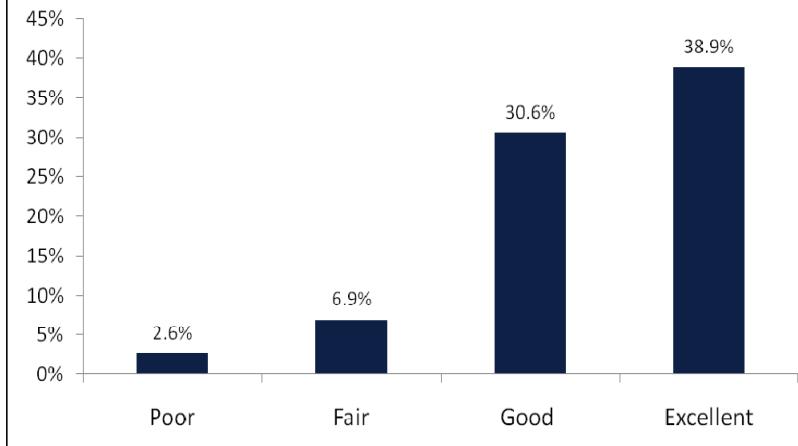

Assessment of NDOT's Performance of Maintenance Activities

Respondents were asked several questions to assess their opinions of the performance of NDOT in maintaining the Nevada State Highway or road that they traveled on *most often* on a *monthly* basis. Overall, the majority of Nevadans indicated that NDOT's performance of maintenance activities was good or excellent.

Snow Removal and Ice Control

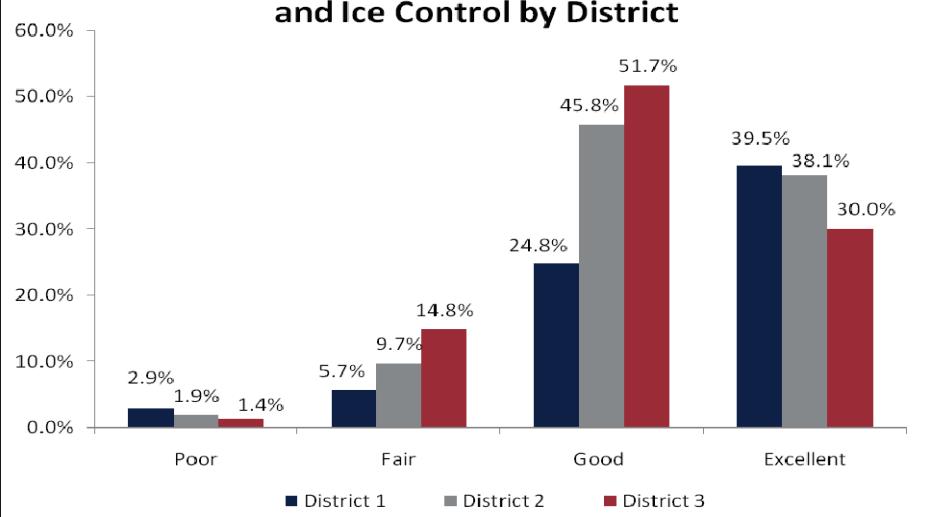

Nearly 70% of Nevadans reported that NDOT's performance in snow removal and ice control was good or excellent, while 7% indicated that it was fair, and 3% indicated it was poor (see Figure 6 and Table C01Q01¹). A noticeable number of Nevadans (21%) indicated that they did not know or refused to answer this question. Moreover, Nevadans in District 1 were more likely to not provide a rating on this maintenance activity possibly due to a lack of experience with weather conditions that necessitate snow removal and ice control.

Figure 6: NDOT's Performance in Snow Removal and Ice Control

In comparison to Nevadans in District 2 (46%) and 3 (52%), Nevadans in District 1 (25%) were less likely to report that NDOT did a good job with snow removal and ice control. Nevadans in District 1 (6%) were also less likely to report that NDOT did a fair job in performing this maintenance task in comparison to those who reside in District 3 (15%). See Figure 7 for a complete break down of responses to this maintenance activity by District.

Figure 7: NDOT's Performance in Snow Removal and Ice Control by District

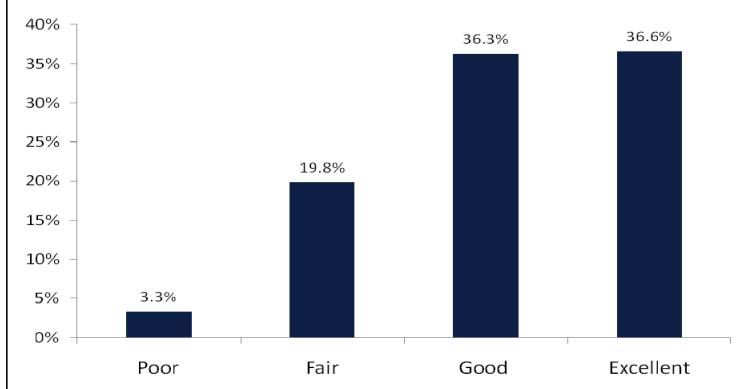

¹These tables follow the numbering system used in the questionnaire (e.g., Table C01Q01 is question number C01Q01 in Appendix B).

Graffiti Removal

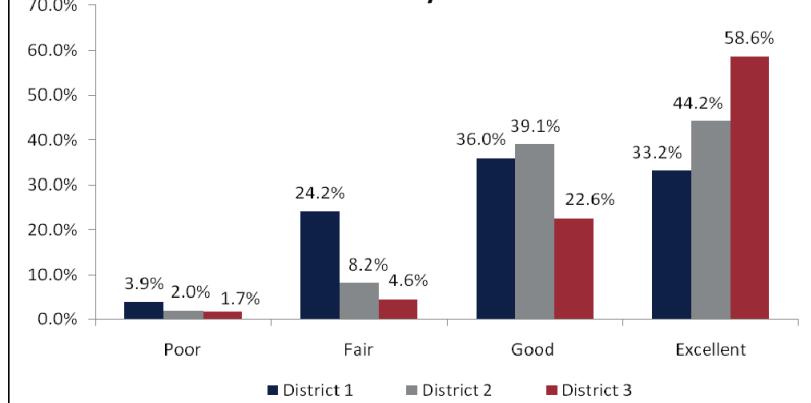

Nevadans were equally positive regarding NDOT's performance of the removal of graffiti; 73% indicated that the performance of this maintenance activity was good or excellent (see Figure 8 and Table C01Q02). However, a large percentage of Nevadans (20%) indicated that NDOT was only doing a fair job of performing this maintenance activity.

Figure 8: NDOT's Performance in Graffiti Removal

In comparison to Nevadans in District 1 (33%) and 2 (44%), Nevadans in District 3 (59%) were more likely to report that NDOT was doing an excellent job in removing graffiti. In contrast, Nevadans in District 1 (24%) were more likely to indicate that NDOT was doing a fair job of performing this task, in comparison to those who reside in District 2 (8%) and District 3 (5%; see Figure 9).

Figure 9: NDOT's Performance in Graffiti Removal by District

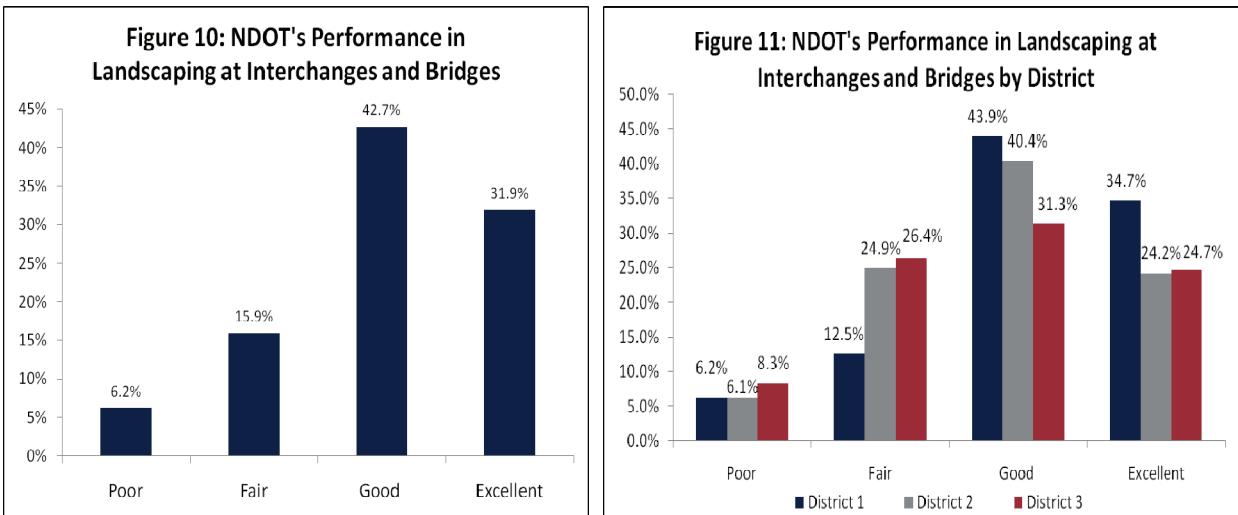

Landscaping at Interchanges and Bridges

When asked how well NDOT has performed in landscaping at interchanges and bridges, 75% of Nevadans reported that NDOT's performance was good or excellent, while 16% indicated it was fair and 6% indicated it was poor (see Figure 10 on next page and Table C01Q03).

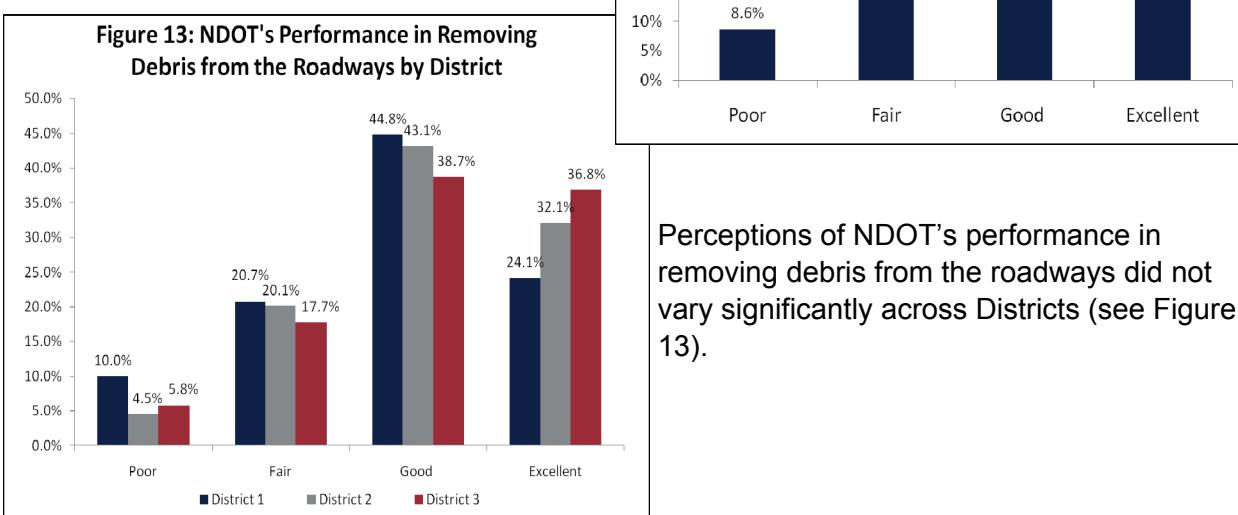

Views of the performance of this maintenance activity did not vary greatly across Districts except that Nevadans in District 2 (25%) and District 3 (26%) were more likely than

Nevadans in District 1 (13%) to indicate that NDOT did a fair job of landscaping at interchanges and bridges (see Figure 11).

Removal of Debris

Nevadans had similar views of NDOT's performance of the removal of debris, including litter and garbage, from the roadways with 71% indicating that the performance of this maintenance activity was good or excellent, 20% indicating that it was fair, and 9% indicating it was poor (see Figure 12 and Table C01Q04).

Maintaining Visible Lane Lines

Nevadans were less positive about NDOT's performance in maintaining visible lane lines on the pavement and the roadway surface. Just over 65% of Nevadans reported that NDOT's performance in maintaining visible lane lines was good or excellent, while 24% indicated that it was fair, and 10% indicated it was poor (see Figure 14 and Table C01Q05).

Nevadans in District 3 (39%) were most likely to state that NDOT performed an excellent job of maintaining visible lane lines on the pavement. In contrast, Nevadans in District 1 (13%) were most likely to indicate that NDOT performed poorly or fairly (26%) with this maintenance activity (see Figure 15).

Figure 14: NDOT's Performance in Maintaining Visible Lines on the Pavement

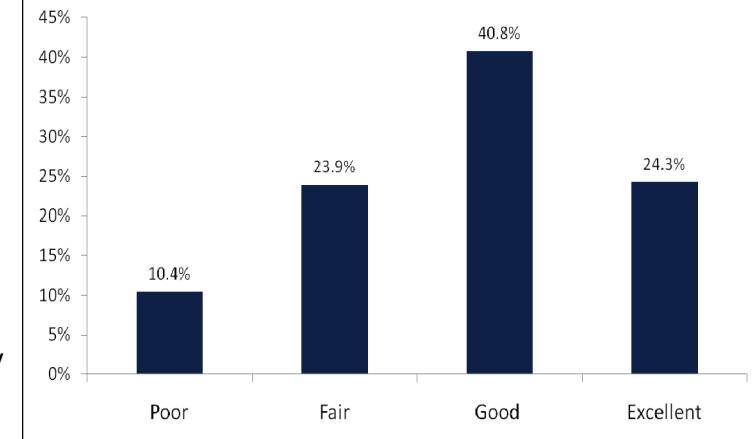

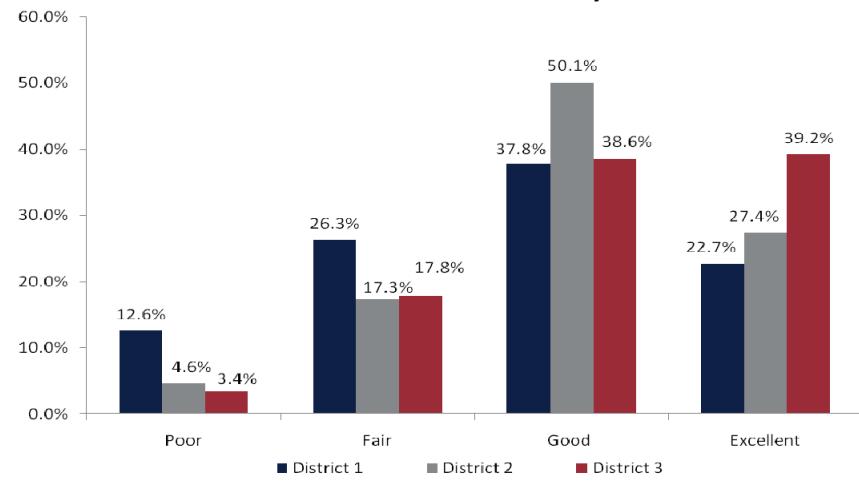

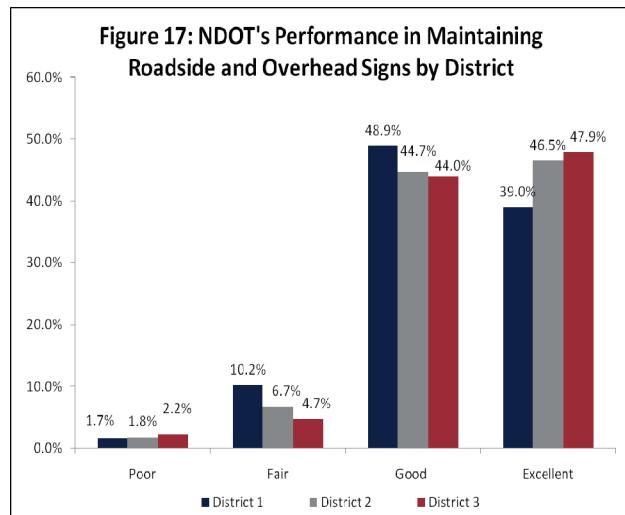

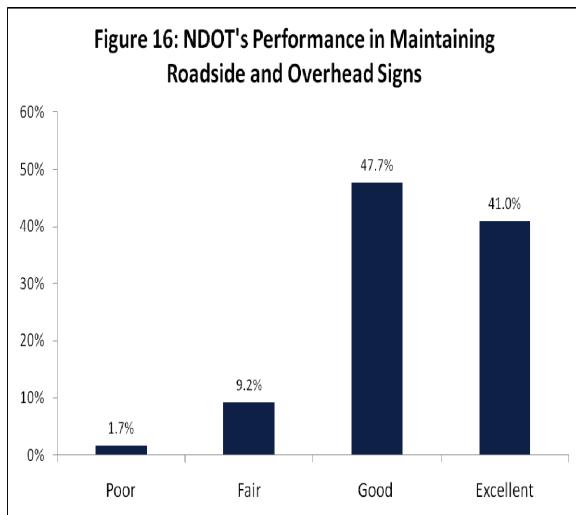

Figure 15: NDOT's Performance in Maintaining Visible Lines on the Pavement by District

Maintaining Roadside and Overhead Signs

Nevadans were most positive about NDOT's performance in maintaining roadside and overhead signs. Nearly 89% of Nevadans indicated that NDOT is doing an excellent or good job with this maintenance activity. A little more than 9% reported that NDOT is doing a fair job and 2% felt that NDOT is doing a poor job maintaining roadside and overhead signs (see

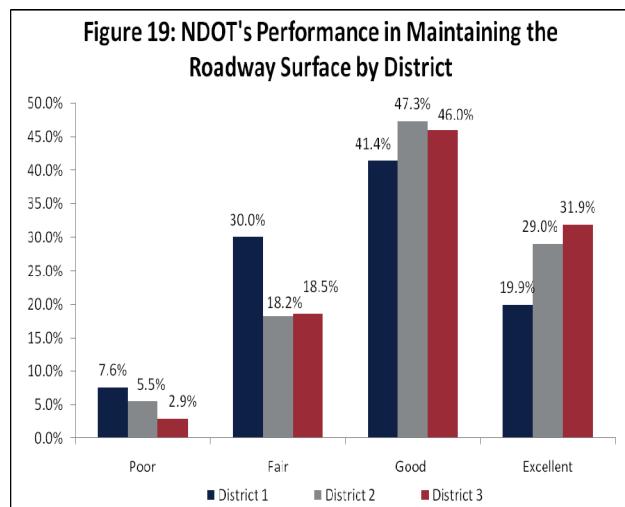

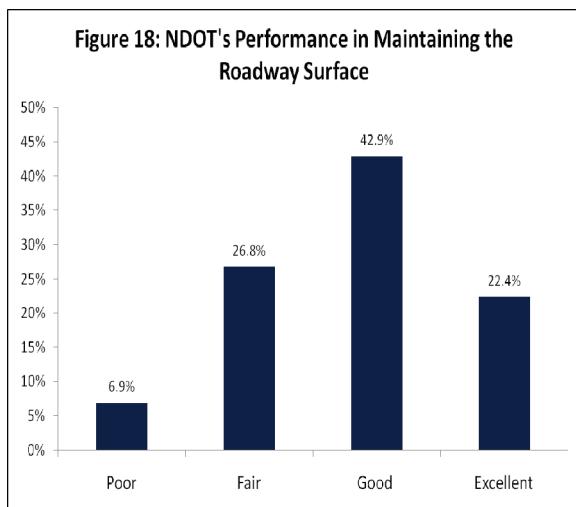

Figure 16 and Table C01Q06). Perceptions of NDOT's performance in maintaining roadside and overhead signs did not vary significantly by District (see Figure 17).

Maintaining Roadway Surface

Just over 65% of Nevadans reported that NDOT's performance in maintaining the roadway surface of the state highway or road that they traveled on most often was good or excellent, while 27% indicated that it was fair, and 7% indicated it was poor (see Figure 18 and Table C01Q07).

Responses to Question C01Q07 did not vary tremendously by District, except that Nevadans in District 1 (30%) were more likely to indicate that NDOT has done only a fair job of maintaining the roadway surface than Nevadans in District 2 (18%; see Figure 19).

Priority of NDOT Maintenance Activities

In regard to NDOT maintenance activities, Nevadans were given a list of tasks and asked what activity should be the highest priority for NDOT in maintaining the state highway or road they travel on most often. The three most popular responses for all three Districts combined were: 1) maintaining the roadway surface (39%); 2) maintaining visible lane lines on the pavement (20%); and 3) removing litter and garbage along the roadways (14%; see Figure 20 and Table C01Q08).

Priorities for NDOT Maintenance activities varied by District. Nevadans in District 1 indicated that maintaining roadway surfaces (39%) and maintaining visible lane lines on the pavement (22%) should be NDOT's number one and two priorities, respectively (see Figure 21). In comparison, those who reside in District 2 indicated that maintaining roadway surfaces (42%) and snow removal and ice control (24%) should be the number one and two priorities, respectively (see Figure 22).

Nevadans in District 3 indicated that snow removal and ice control (44%) and maintaining roadway surfaces (34%) should be the number one and two priorities, respectively, for NDOT (see Figure 23 on next page).

Figure 20: Priority of NDOT Maintenance Activities

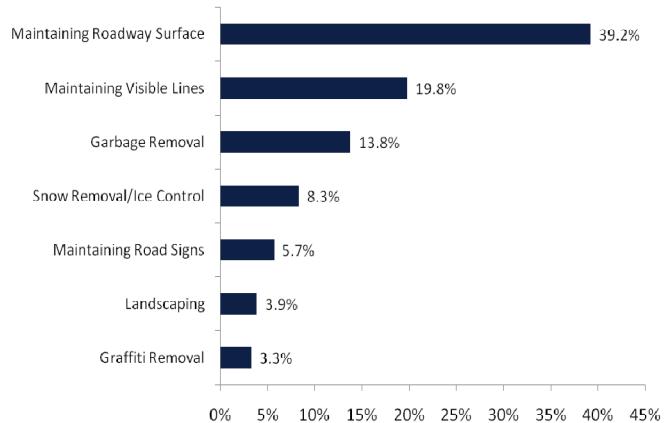

Figure 21: Priority of NDOT Maintenance Activities for NDOT District 1

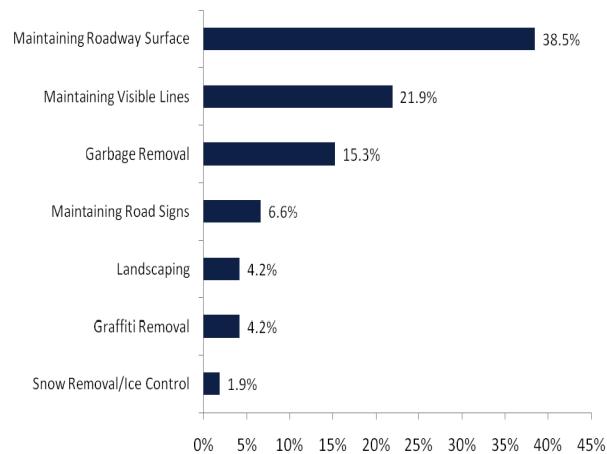

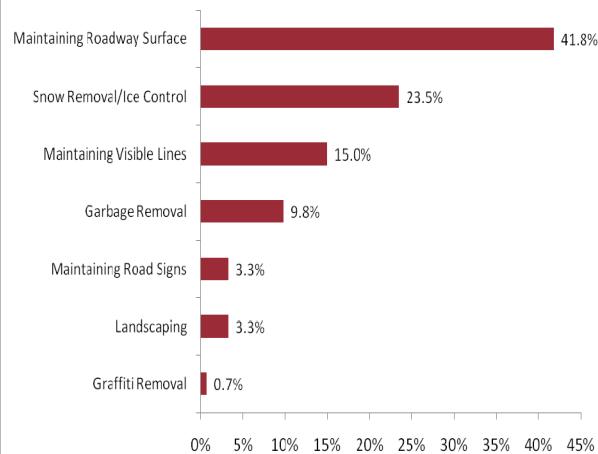

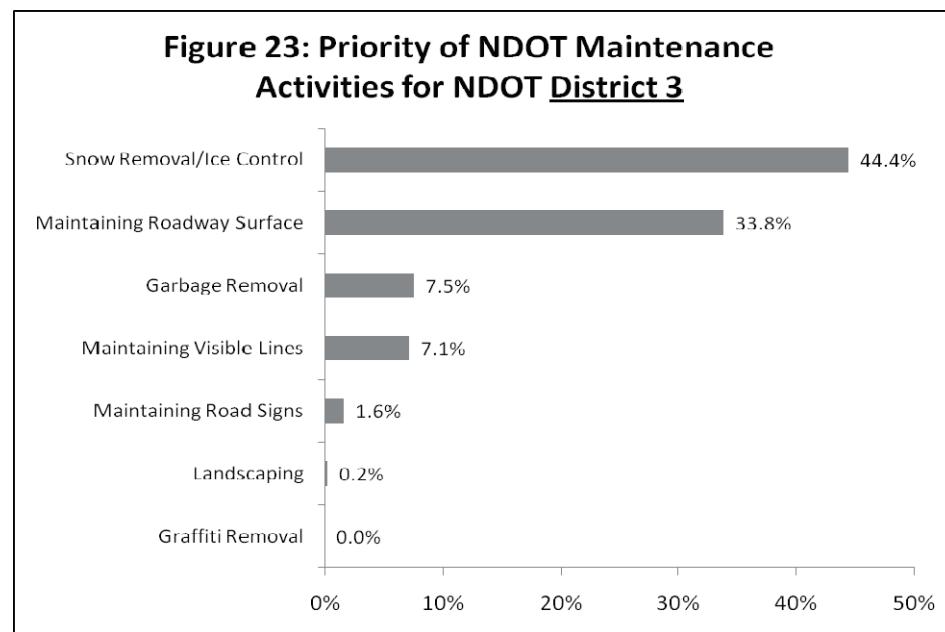

Figure 22: Priority of NDOT Maintenance Activities for NDOT District 2

Highway Maintenance Improvement Suggestions

Respondents were asked an open-ended question, "What is the *one* thing NDOT can do to improve its highway maintenance services?" The most common responses fell into the following categories: 1) maintaining roadway surface (e.g., fix potholes, smoother surface, more timely maintenance); 2) maintaining surface lines (e.g., clear lines; more visibility of lines during night, rain, and snow; keeping them painted more often); 3) garbage removal (e.g., more cleanup crews, remove litter, garbage, debris; clearing off ramp walls and fences); 4) snow/ice control (e.g., quicker response to snow removal; more plowing; getting out earlier in morning); 5) landscaping (e.g., beautification, plant more greenery); 6) graffiti (graffiti removal); and 7) congestion.

Congestion was subdivided further into the following subcategories: a) construction of new lanes (e.g., widen freeways, add more lanes, build more roads and freeways); b) poor signal timing/more signs (e.g., more traffic lights and signs; stoplight instead of roundabouts; improve timing of the street lights); and c) construction causing traffic (e.g., construction cone confusion, speed up construction projects, don't block off so much of the road, warn drivers sooner).

Other suggestions were offered that did not fall into any particular category. Examples of such suggestions include: more railings, increase financing, respond to problems more quickly, hire more employees, plan better, and provide more driver assistance on the roads (e.g., flat tire assistance, emergency assistance; see Appendix G). A complete list was provided to NDOT in a separate file.

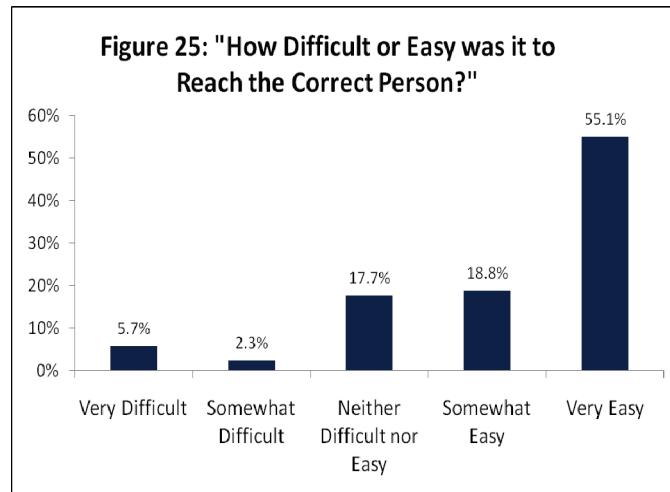

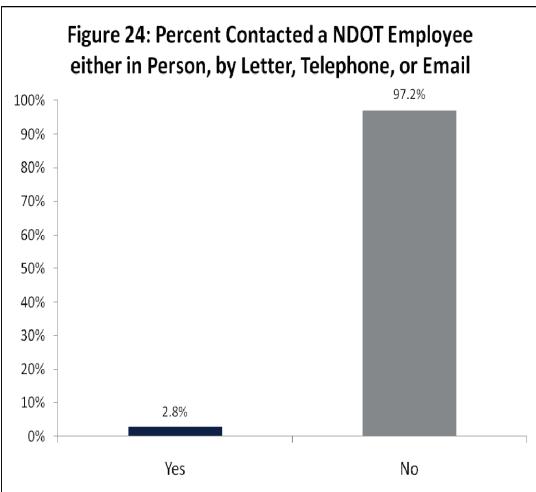

Experiences with NDOT Customer Service

Participants were asked a number of questions regarding opportunities for and the level of customer service provided by NDOT Maintenance within the last year.

Employee Contact Experiences

A very small percentage of Nevada adults (3%) have contacted or attempted to contact an employee at NDOT either in person, by letter, telephone or email. Nevadans in District 3 (11%) were more likely than those in District 1 (2%) or 2 (4%) to have contacted or attempted to contact an employee (see Figure 24 and Table C02Q01).

Of the 3% of Nevadans who contacted or attempted to contact an NDOT employee, 74% indicated that it was somewhat or very easy to reach the correct person, while 18% indicated that it was neither difficult nor easy and 8% reported and it was somewhat or very difficult (see Figure 25 and Table C02Q02a). However, the vast majority of Nevadans who contacted or attempted to contact an NDOT employee was able to get the information that they needed (89%; see Table C02Q02b). Further, 96% of these individuals reported that they received the needed information in a timely manner (see Table C02Q02c).

Preferred Method of NDOT Information Dissemination

When presented with a list of dissemination options for current NDOT roadway conditions, 50% of all Nevadans indicated that they would prefer to receive information via electronic message signs. Other popular options included TV (14%), radio (11%), toll-free phone number (8%), and internet or NDOT website (8%; see Figure 26 on following page and Table C02Q03).

Figure 26: Best Way for NDOT to Provide Current Roadway Conditions

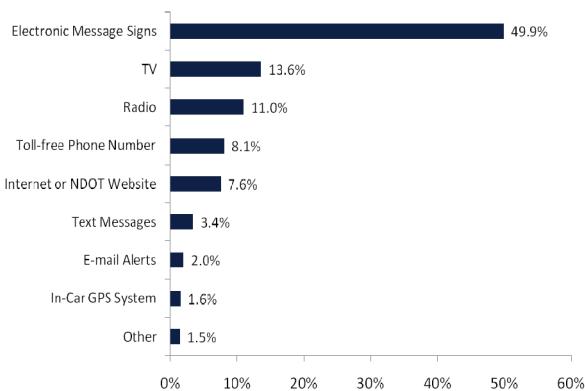

Figure 27: Best Way for NDOT to Provide Current Roadway Conditions for District 1

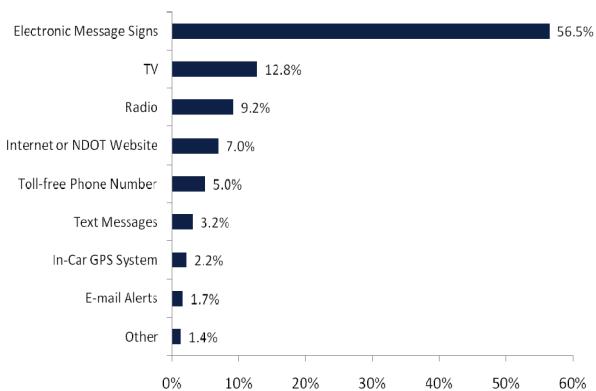

Figure 28: Best Way for NDOT to Provide Current Roadway Conditions for District 2

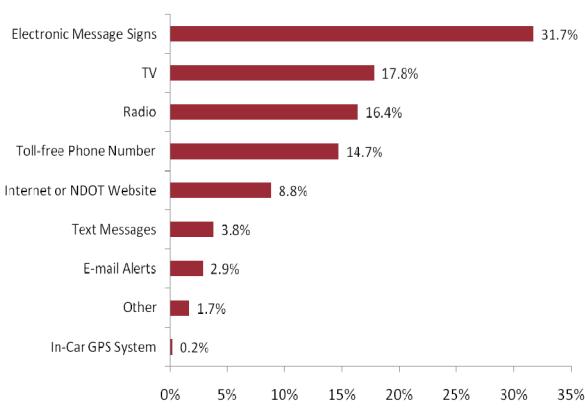

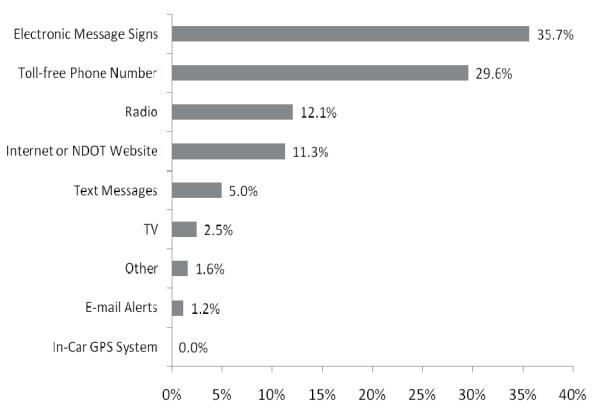

Figure 29: Best Way for NDOT to Provide Current Roadway Conditions for District 3

The preferred method of current NDOT roadway condition information dissemination varied slightly by District (see Figures 27-29). Although Nevadans in all three Districts indicated that electronic message signs were the best way to get them current roadway information (50%), a larger percentage of residents in District 1 (57%) indicated that this was their preferred method of obtaining information. Obtaining information via TV was the second most endorsed method of obtaining information for individuals residing in District 1 (13%) and 2 (18%). However, only 3% of residents in District 3 indicated that this would be the best way for them to receive current NDOT roadway information. Instead, 30% of residents of District 3 endorsed a toll-free phone number as their second preferred option of obtaining information. It is also interesting to note that Nevadans in District 2 (15%) and 3 (30%) were more likely than those in District 1 (5%) to indicate that a toll-free phone number was the best way to disseminate information to them.

NDOT's Toll-Free Phone Number

Nearly 40% of Nevadans reported that they knew that NDOT has a toll-free road condition number (i.e., 511 or 1-877-NV-ROADS), while 60% reported that they were not aware of the toll-free phone number (see Figure 30 and Table C02Q04a). When compared to Nevadans in District 2 (76%) and 3 (80%), individuals who reside in District 1 (27%) were least likely to report that they knew about NDOT's toll-free phone number. Of those who were aware of the toll-free road condition number, only 34% reported having called the number during the past year, (see Figure 31 and Table C02Q04b) and of those, the vast majority (81%) reported that they were somewhat or very satisfied with the number (see Figure 32 and Table C02Q04c).

Figure 30: "Did you Know that NDOT has a Toll-Free Phone Number?"

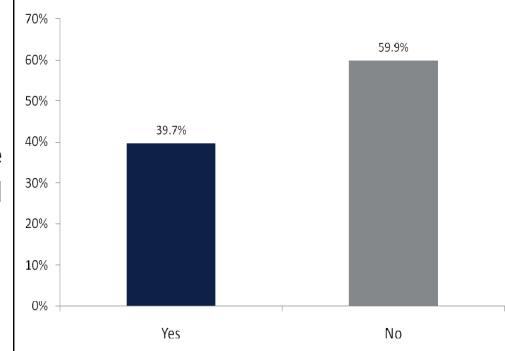

Figure 31: "Have you Called NDOT's Road Condition Number?"

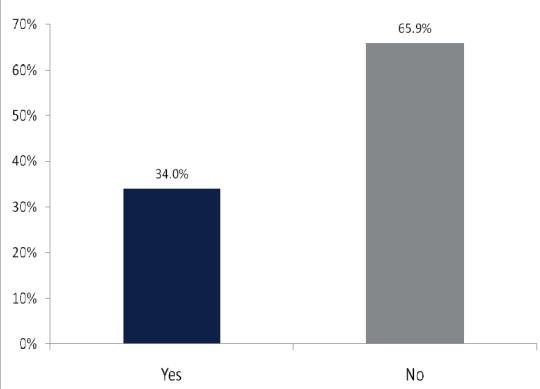

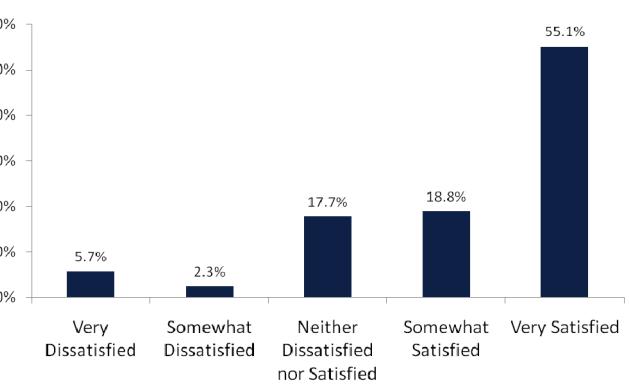

Figure 32: Satisfaction with NDOT's Road Condition Number

NDOT's Website

A higher percentage of Nevadans (49%) reported that they knew that NDOT has a website (i.e., www.NevadaDOT.com; see Figure 33 and Table C02Q05a). Of those who were aware of NDOT's website, only 32% reported that they had visited the website during the past year (see Figure 34 on following page and Table C02Q05b); of those, 74% indicated that it was somewhat or very easy to use, 21% indicated that it was neither difficult nor easy to use, and 3% indicated that it was somewhat or very difficult to use (see Figure 35 on following page and Table C02Q05c).

Figure 33: "Did you Know that NDOT has a Website?"

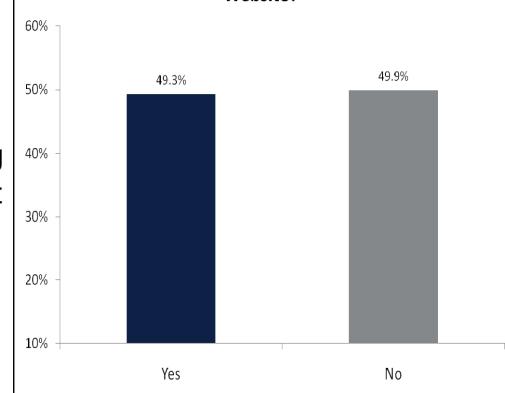

Figure 34: "Have you Visited NDOT's Website During the Past Year?"

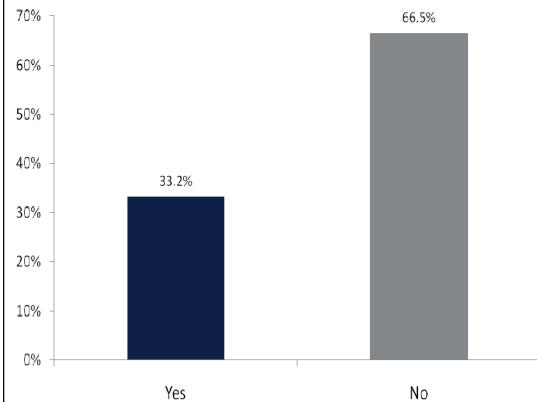

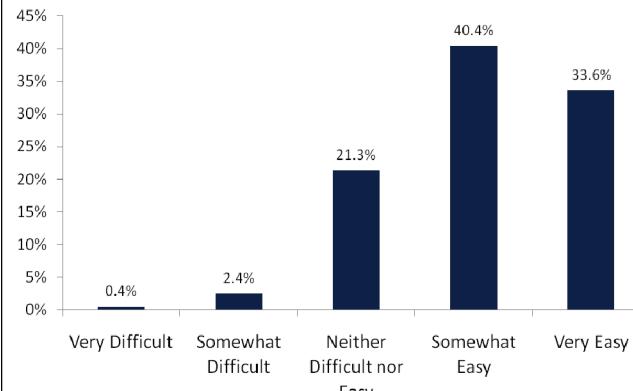

Figure 35: "How Difficult or Easy was the Website to Use?"

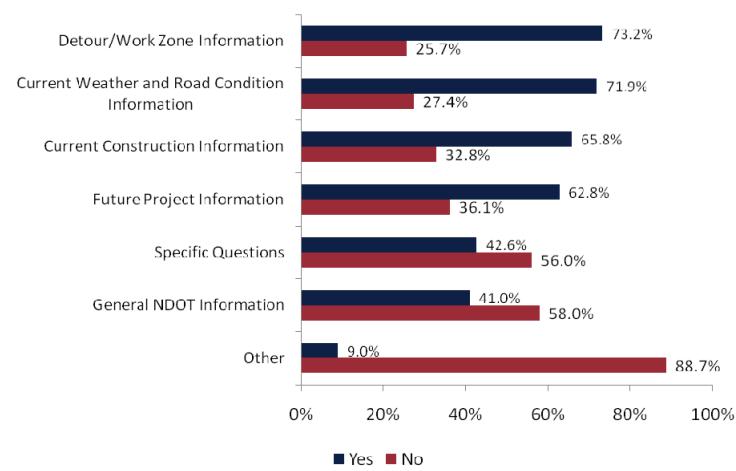

Once again, Nevadans in District 1 (46%) were less likely to indicate that they knew that NDOT has a website, in comparison to those in District 2 (60%) and 3 (58%; see Table C02Q05a). Additionally, in comparison to those in District 2 (46%), a smaller percentage of the Nevadans in District 1 (27%) who knew about NDOT's website, had visited the website (see Table C02Q05b).

Respondents were asked if there was anything that NDOT could do to make the website easier to use. Common responses included: 1) ensuring that website information is updated regularly (weather, road conditions, accidents); 2) changing the website interface to make it more user-friendly (e.g., "Make the website less complex," "Increase the font size") and visually appealing (e.g., "Add more graphics,"); 3) better contact information (more widely disseminated and more clear on website); and 4) more information about specific roads and highways (e.g., links to information about specific roads and highways). Respondents also were interested in subscribing to NDOT for email alerts informing them about road construction and closed traffic. See Appendix G for a more detailed list of responses to this question.

Respondents were presented with a list of items and asked to indicate if they would be interested in using NDOT's website to obtain more information about each item (see Figure 36 and Table C02Q06a). The majority of Nevadans reported that they would like to use NDOT's website to access information about

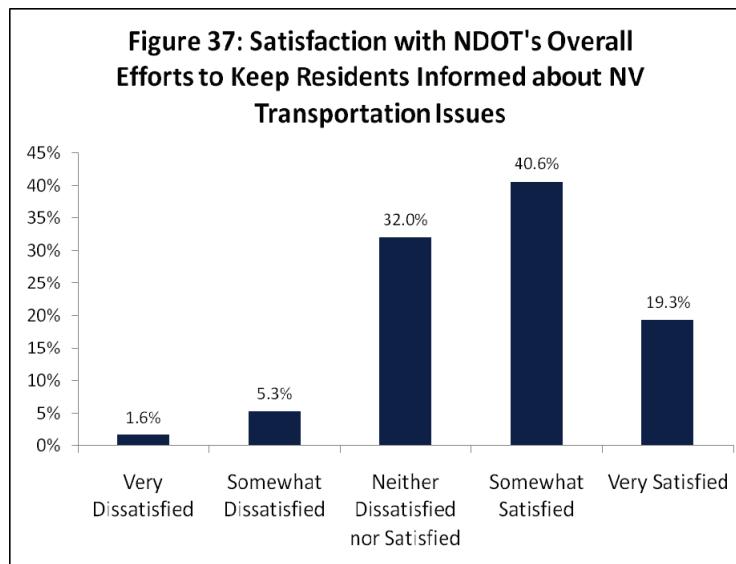

Figure 36: Desired NDOT Website Content

detour or work zones (73%), current weather and road conditions (72%), current construction projects (66%), and future project planning (63%). The majority of Nevadans indicated that they were not interested in using NDOT's website to obtain general information about NDOT (58%) or answers to a specific question or concern they might have (56%).

NDOT Effort Rating

Respondents were also asked to rate NDOT's overall efforts to keep residents informed about transportation related issues. The majority of Nevadans (60%) indicated that they were somewhat or very satisfied with NDOT's efforts, while a small minority (7%) indicated that they were somewhat or very dissatisfied (see Figure 37 and Table C02Q07).

Customer Service Improvement Suggestions

Respondents were asked what one thing NDOT can do to improve its level of customer service. Common responses included: 1) improving communication with users/customers (e.g., "Get the word out more on what they're doing and why," "Keep website information current," "Keep messages on toll-free number updated"); and 2) be more accessible to the public (e.g., "Be more visible on local news stations/commercials," "Advertise their telephone number for road conditions"). Many Nevadans responded to this question by suggesting ways in which NDOT could improve road construction (e.g., "Fix potholes," "Expand highways") or helping customers directly, "Create more emergency roadside service." A complete list of raw responses was provided to NDOT in a separate file.

Nevada Roadway Congestion

Next, respondents were asked about their opinions regarding the biggest factor that contributes to delayed travel times on *any* Nevada street or highway they travel on in their city

or town. Overall, Nevadans indicated that the three biggest contributors to delayed travel times in their city or town were construction (35%), poor signal timing on local roads (21%), and not enough travel lanes to accommodate traffic (19%; see Figure 38 and Table C03Q01).

Perceptions of the biggest contributor to delayed travel times on any Nevada street or highway that they travel on in their city or town varied by District (see Figures 39-41). Nearly 42% of Nevadans who reside in District 1 indicated that construction was the biggest contributor to delayed travel times, whereas only 17% of residents of District 2 and 22% of residents of District 3 indicated that this was the biggest contributor. Approximately 30% of Nevadans in District 2 reported that poor signal timing on local roads was the biggest contributor to delayed travel times. In comparison, only 19% of those in District 1 and 16% of those in District 3 indicated that this was the biggest contributor to delayed travel times in their districts. Just over 26% of Nevadans in District 3 reported that winter or stormy weather was the biggest contributor to delayed travel times on their city or town roadways. However, only 6% of those in District 2 and 3% of those in District 1 indicated that this was the biggest contributor to delayed travel times in their districts.

Figure 38: Biggest Contributor to Delayed Travel Times on Nevada Roadways

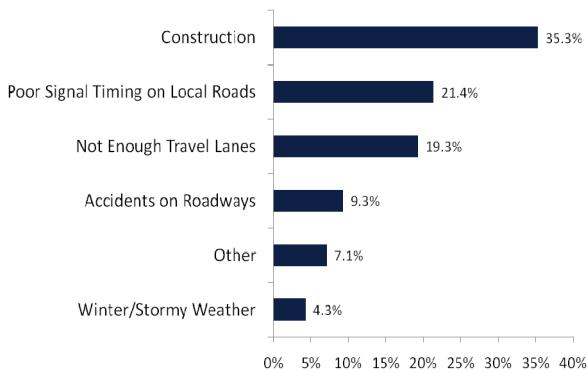

Figure 39: Biggest Contributor to Delayed Travel Times on Nevada Roadways for District 1

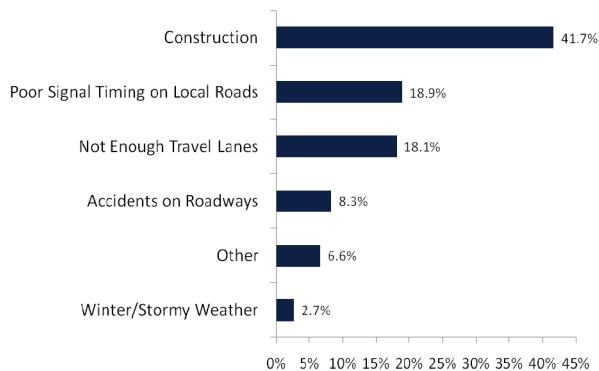

Figure 41: Biggest Contributor to Delayed Travel Times on Nevada Roadways for District 3

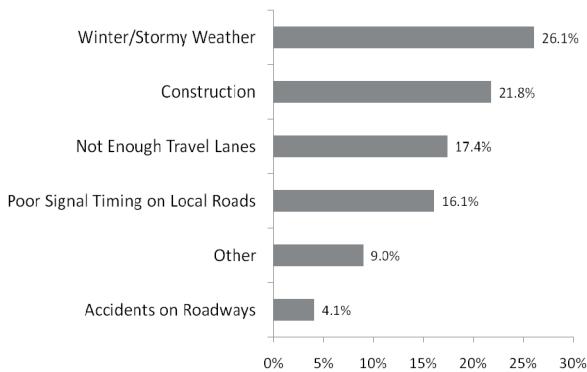

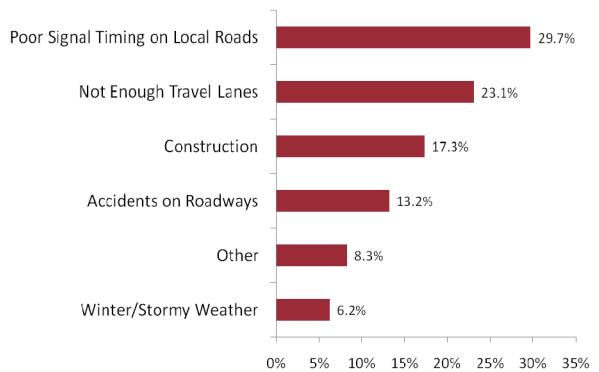

Figure 40: Biggest Contributor to Delayed Travel Times on Nevada Roadways for District 2

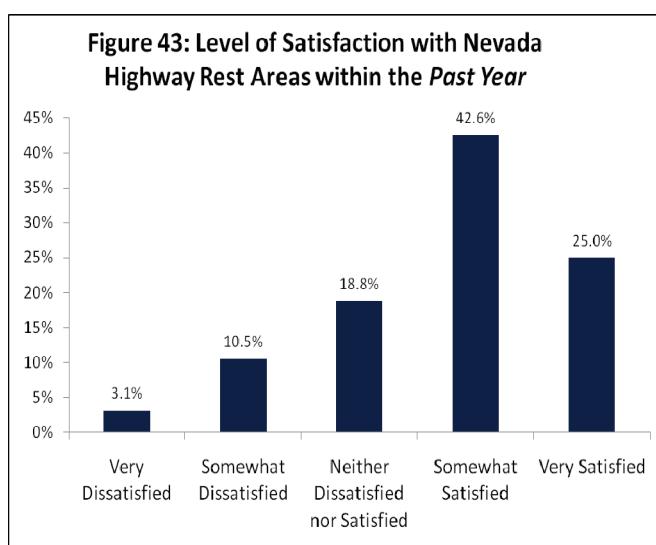

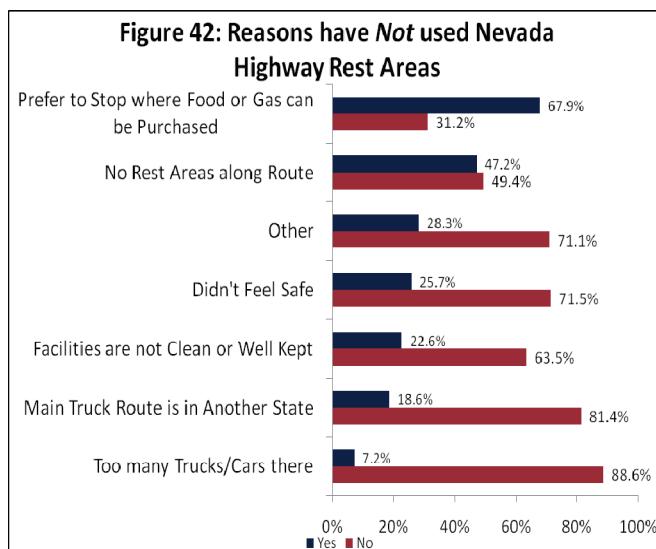

Truck Drivers' Experiences

A small percentage (5%) of Nevadans are truck drivers or professional long-distance drivers (see Table C04Q01). The majority (46%) of these drivers, spend either six to seven days traveling on Nevada State Highways, while nearly 41% drive on Nevada State Highways one to five days a week (see Table C04Q02).

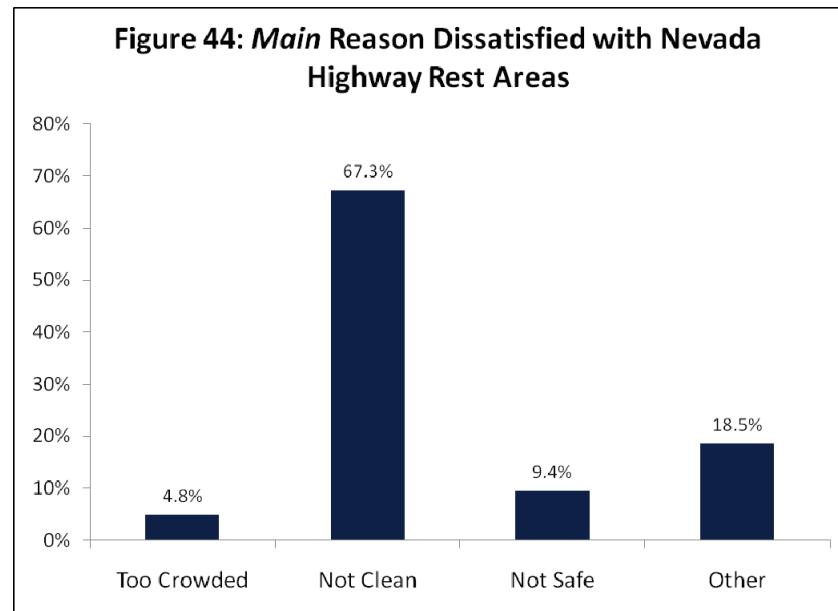

Nevada Highway Rest Areas Use and Satisfaction

A small percentage of Nevadans (28%) reported using at least one Nevada Highway Rest Area in the past year. Nevadans in District 3 (60%) were more likely than those in Districts 1 (23%) and 2 (39%) to have used any Nevada Highway Rest Area in the past year (see Table C04Q03). Respondents who had not used any Nevada Highway Rest Area in the past year were asked to indicate why they had not done so (see Figure 42 and Tables C04Q04a-C04Q04g). The most popular reasons for not having used a Nevada Rest Area include a preference to stop where food or gas can be purchased (68%) and no rest areas along the drivers route (47%). A smaller percentage of Nevadans reported that they did not use rest areas in Nevada in the past year because they did not feel safe (26%), they believe facilities are not clean or well kept (23%), or because of another reason not listed.

Within the past year, the majority of Nevadans (61%) were satisfied (either somewhat or very) with Nevada Highway Rest Areas (see Figure 43 and Table C04Q05). Nearly 19% were neither dissatisfied nor satisfied and 14% were somewhat or very dissatisfied. Those Nevadans who indicated that they were dissatisfied with rest areas in Nevada were asked for the main reason they were unsatisfied. The vast majority of Nevadans (67%) indicated that they were

dissatisfied because the rest areas were unclean (see Figure 44 and Table C04Q06). Additionally, females (87%) were more likely than males (46%) to report that unclean rest areas were the main reason why they were not satisfied with the Highway Rest Areas (see Table C04Q06).

Appendix A:

Post-Weighting and

Confidence Interval

Information

Post-Weighting Methodology

Surveys are conducted to obtain a representative sample of the population. However, due to the nature of any sampling process, over-sampling some categories and under-sampling others is more likely to occur. In other words, the way a certain characteristic (such as district, sex, age etc.) of the sample is distributed may differ from the way it is distributed in the population which introduces bias into any estimate you may obtain from the sample data. To correct for these biases mathematically and to restore the population's district, sex and age distribution in the sample, post-stratification weighting must be conducted. The post-stratification adjustment forces the sampling weights within each post stratum (district, sex and age in the respondent sample) to the known population distribution for the state of Nevada. Post-stratification improves the precision of the sample estimators and serves as a correction for non-response and under-coverage error, which consequently induces a relative reduction in bias.

Un-weighted rates from the survey are not influenced by the district, sex, and age distributions in the population. In particular, by using un-weighted rates, it is assumed implicitly, that every single person in the survey represents one and only one person in the whole population (which is not the case!). For example, if people of the age 18-24 were underrepresented in the survey, after adjusting for stratum, sex and age, these people of the age 18-24 years old will be granted a higher weight in order to overcome such under representation in the survey to account for differing distributions of district, sex and age within the entire population. So, to compensate for over-representation and/or under-representation in the sample, *weighted rates* must be used.

$$W = \frac{p_p}{p_s}$$

The formula for the weights is: $\frac{p_p}{p_s}$ where p_p is the population proportion, and p_s is the sample proportion. The formula was used on the cell proportion from tables indicating the size of particular subpopulations based on known demographic characteristics (e.g., males aged 18 – 24 living in district #1). After post-stratification, the weighting assured that the representation of certain subpopulations corresponded to figures from the population as shown in Table B in Appendix D.

Confidence Interval Information

Confidence intervals provide a way to report an estimate of a population parameter (such as a mean μ or a proportion p) along with some information about the estimate's precision. Although different settings lead to different formulas for computing confidence intervals, the basic interpretation is always the same. The weighted prevalence and the 95% confidence intervals (CI) in this report were obtained using the SURVEYFREQ procedures of SAS. PROC SURVEYFREQ computes confidence limits for the proportions in the frequency and cross tabulation tables.

For the proportion in table cell (r, c) , the confidence limits are computed as:

$$\hat{P}_{rc} \pm \left(t_{df, \alpha/2} \times \text{StdErr}(\hat{P}_{rc}) \right)$$

where \hat{P}_{rc} is the estimate of the proportion in table cell (r, c) , $\text{StdErr}(\hat{P}_{rc})$ is the standard error of the estimate, and $t_{df, \alpha/2}$ is the $100(1 - \alpha/2)$ th percentile of the t distribution. The confidence limits for row proportions and column proportions are computed similarly to the confidence limits for table cell proportions. The 95% confidence intervals are a measure of how precise an estimated effect is. The interval would contain the true effect 95% of the time if the study were repeated multiple times. The range of a CI is dependent on the number of observations.

Appendix B: NDOT Maintenance Questionnaire

Introduction

Hello, my name is [name] and I'm calling from the University of Nevada, Reno. I am not calling to ask for donations or to sell you anything. I am calling on behalf of the Nevada Department of Transportation (NDOT) to learn more about public perceptions and attitudes concerning customer service and maintenance of highways in the State of Nevada. Would you mind helping us out by answering some questions?

1. Correct Number (Proceed to next question) [\[goto Private Residence\]](#)
2. Number is not the same

Wrong Number

Thank you very much, but I seem to have dialed the wrong number. It's possible that your number may be called at a later time.

1. Return to [Introduction](#)

Private Residence

Is this a private residence?

1. Yes, continue [\[goto Is Cell\]](#)
2. No, Non-Residential [\[goto Non-Residence\]](#)

Non-Residence

Thank you very much, but we are only interviewing private residences. [\[end interview\]](#)

Is Cell

Is this a cellular telephone?

Read only if necessary: By cellular telephone we mean a telephone that is mobile and usable outside of your neighborhood.

1. No, not a cellular telephone, continue. [\[goto Adults\]](#)
2. Yes, a cellular telephone [\[goto Cell Yes\]](#)

Cell Yes

Thank you very much, but we are only interviewing land line phones in private residences. [\[end interview\]](#)

Adults

I need to randomly select one adult who lives in your household to be interviewed. How many members of your household, including yourself, are 18 years of age or older and have DRIVEN a motor vehicle in the past month?

NOTE: Motor vehicle includes motorcycles and buses as long as you are the driver. Do not include bicyclists, pedestrians, or public transportation.

Enter the number of adults [if answer = 1 goto One Adult]

Men

How many of these adults are men?

 Enter Number of Men

Women

How many of these adults are women?

 Enter Number of Women

Selected

The person in your household I need to speak with is the _____.

Are you the _____?

1. Yes [goto Selected Speaking]
2. No [goto Get New Adult]

One Adult

Are you the adult?

Note: Ask Gender if necessary.

1. Yes and the respondent is a male. [goto Selected Speaking]
2. Yes and the respondent is a female. [goto Selected Speaking]
3. No [goto Ask Gender]

Ask Gender

Is the Adult a man or a woman?

1. Male
2. Female

Get Adult

May I speak with _____?

1. Yes, Adult is coming to the phone [goto New Adult]
2. No, go to next screen, schedule a call-back [goto New Adult]

Selected Speaking

Then you are the person I need to speak with.

1. Person interested, continue [goto Intro Screen]
2. Go Back to Adults Question. [goto Adults]

Get New Adult

May I speak with the _____?

1. Yes, Selected Respondent coming to the phone [goto New Adult]
2. No, go to next screen, schedule a call-back [goto New Adult]
3. Go Back to Adults Question. [goto Adults]

New Adult

Hello, my name is [name] and I'm calling from the University of Nevada, Reno. I am not calling to ask for donations or to sell you anything. Ineligible

Thank you very much, but we are only interviewing people who report traveling on one of the Nevada State Highways or roads I listed. Thank you for your time. [end interview]

Section 1 - Maintenance Activities

C01Q01

The first set of questions will ask you about your opinions of the PERFORMANCE of NDOT in maintaining the State Highway or road that you reported traveling on most often on a monthly basis.

Please rate NDOT's performance WITHIN THE PAST YEAR, on a scale of one to four where ONE is poor, TWO is fair, THREE is good, and FOUR is excellent on each of the following questions. Please keep in mind the road or highway you reported traveling on most often.

Overall, how well do you think NDOT has PERFORMED in snow removal and ice control?

Read only if necessary:

1. Poor
2. Fair
3. Good
4. Excellent
7. Don't know/not sure
9. Refused

C01Q02

Please rate NDOT's performance WITHIN THE PAST YEAR, on a scale of one to four where ONE is poor, TWO is fair, THREE is good, and FOUR is excellent on each of the following questions. Please keep in mind the road or highway you reported traveling on most often.

Overall, how well do you think NDOT has PERFORMED in the removal of graffiti?

Read only if necessary:

1. Poor
2. Fair
3. Good
4. Excellent
7. Don't know/not sure
9. Refused

C01Q03

Please rate NDOT's performance WITHIN THE PAST YEAR, on a scale of one to four where ONE is poor, TWO is fair, THREE is good, and FOUR is excellent on each of the following questions. Please keep in mind the road or highway you reported traveling on most often.

Overall, how well do you think NDOT has PERFORMED in landscaping at interchanges and bridges?

NOTE: By landscaping, we mean to improve the appearance of an area of land, a highway, etc. by methods such as planting trees, shrubs, or grass.

Read only if necessary:

1. Poor
2. Fair
3. Good
4. Excellent
7. Don't know/not sure
9. Refused

C01Q04

Please rate NDOT's performance WITHIN THE PAST YEAR, on a scale of one to four where ONE is poor, TWO is fair, THREE is good, and FOUR is excellent on each of the following questions. Please keep in mind the road or highway you reported traveling on most often.

Overall, how well do you think NDOT has PERFORMED in removing debris, including litter and garbage, from the roadways?

Read only if necessary:

1. Poor
2. Fair
3. Good
4. Excellent
7. Don't know/not sure
9. Refused

C01Q05

Please rate NDOT's performance WITHIN THE PAST YEAR, on a scale of one to four where ONE is poor, TWO is fair, THREE is good, and FOUR is excellent on each of the following questions. Please keep in mind the road or highway you reported traveling on most often.

Overall, how well do you think NDOT has PERFORMED in maintaining visible lane lines on the pavement?

If they ask what visible lane lines refer to, say: "for example, painted lane stripes on roadway"

Read only if necessary:

1. Poor
2. Fair
3. Good
4. Excellent
7. Don't know/not sure
9. Refused

C01Q06

Please rate NDOT's performance WITHIN THE PAST YEAR, on a scale of one to four where ONE is poor, TWO is fair, THREE is good, and FOUR is excellent on each of the following questions. Please keep in mind the road or highway you reported traveling on most often.

Overall, how well do you think NDOT has PERFORMED in maintaining roadside and overhead signs?

If they ask what road signs refer to, say: "for example, speed limit signs, interchange exits, directional signs, and exit signs"

Read only if necessary:

1. Poor
2. Fair
3. Good
4. Excellent
7. Don't know/not sure
9. Refused

C01Q07

Please rate NDOT's performance WITHIN THE PAST YEAR, on a scale of one to four where ONE is poor, TWO is fair, THREE is good, and FOUR is excellent on each of the following questions. Please keep in mind the road or highway you reported traveling on most often.

Overall, how well do you think NDOT has PERFORMED in maintaining the roadway surface?

If they ask what maintaining the roadway surface refers to, say: "for example, filling cracks and potholes"

Read only if necessary:

1. Poor
2. Fair
3. Good
4. Excellent
7. Don't know/not sure
9. Refused

C01Q08

What do you think should be the HIGHEST PRIORITY for NDOT in maintaining the State Highway or road that you travel on most often? Please allow me to read the entire list before answering and then choose ONLY ONE response.

If they ask what visible lane lines refer to, say: "for example, painted lane stripes on roadway"

If they ask what road signs refer to, say: "for example, speed limit signs, interchange exits, directional signs, and exit signs"

If they ask what maintaining the roadway surface refers to, say: "for example, filling cracks and potholes"

01. Snow removal and ice control
02. The removal of graffiti
03. Landscaping at interchanges and bridges
04. Removing litter and garbage along the roadways
05. Maintaining visible lane lines on the pavement
06. Maintaining road signs
07. Maintaining the roadway surface
08. Other (specify)
77. Don't know/not sure
99. Refused

C01Q09

What is ONE thing NDOT can do to improve its highway maintenance services?

Section 2 - Customer Service

C02Q01

The next set of questions asks about the level of customer service provided by NDOT WITHIN THE PAST YEAR.

During the past YEAR, have you contacted or attempted to contact a NDOT employee either in person, by letter, telephone, or e-mail?

If necessary, say: "Please answer with a simple 'yes' or 'no'"

1. Yes
2. No [goto C02Q03]
7. Don't know/not sure [goto C02Q03]
9. Refused [goto C02Q03]

C02Q02a

I am going to ask you a series of questions about the LAST TIME that you attempted to contact NDOT.

During the last attempt you made to contact NDOT, how difficult or easy was it for you to reach the CORRECT person? Would you say it was ONE, very difficult, TWO, somewhat difficult, THREE, neither difficult nor easy, FOUR, somewhat easy, or FIVE, very easy?

1. Very difficult
2. Somewhat difficult
3. Neither difficult nor easy
4. Somewhat easy
5. Very easy
7. Don't know/not sure
9. Refused

C02Q02b

Were you able to get the information that you needed?

1. Yes
2. No [goto C02Q03]
7. Don't know/not sure [goto C02Q03]
9. Refused [goto C02Q03]

C02Q02c

Did you receive the information that you needed in what you consider to be a timely manner?

1. Yes
2. No
7. Don't know/not sure
9. Refused

C02Q03

Which of the following is the best way for the Nevada Department of Transportation to provide you with current NDOT roadway conditions? Please allow me to read the entire list before answering and then choose ONLY ONE response.

01. Electronic message signs along freeways and State Highways
02. Radio
03. TV
04. E-mail alerts
05. Internet or NDOT Website
06. Toll-free phone number about current road conditions
07. In-Car GPS system
08. Text messages sent to your cell phone
09. Other (specify)

77. Don't know/not sure

99. Refused

C02Q04a

Did you know that NDOT has a toll-free road condition number, 511 or 1-877-NV-ROADS (SAYN-V-Roads, not Nevada Roads; phone number if asked: 1-877-687-6237), that provides information about road conditions on State Highways?

1. Yes
2. No [goto C02Q05a]
7. Don't know/not sure [goto C02Q05a]
9. Refused [goto C02Q05a]

C02Q04b

Have you called NDOT's road condition number, either 511 or 1-877-NV-ROADS (1-877-687-6237), during the past year?

1. Yes
2. No [goto C02Q05a]
7. Don't know/not sure [goto C02Q05a]
9. Refused [goto C02Q05a]

C02Q04c

Overall, how dissatisfied or satisfied are you with NDOT's road condition number? Would you say you are ONE, very dissatisfied, TWO, somewhat dissatisfied, THREE, neither dissatisfied nor satisfied, FOUR, somewhat satisfied, or FIVE, very satisfied?

1. Very dissatisfied
2. Somewhat dissatisfied
3. Neither dissatisfied nor satisfied
4. Somewhat satisfied
5. Very satisfied
7. Don't know/not sure
9. Refused

C02Q05a

Did you know that NDOT has a website, W-W-W "dot" Nevada D-O-T "dot" com? And Nevada is spelled out?

1. Yes
2. No [goto C02Q06a]
7. Don't know/not sure [goto C02Q06a]
9. Refused [goto C02Q06a]

C02Q05b

Have you visited NDOT's website during the past year?

- 1. Yes
- 2. No [goto C02Q06a]
- 7. Don't know/not sure [goto C02Q06a]
- 9. Refused [goto C02Q06a]

C02Q05c

How difficult or easy was the website to use? Would you say it was ONE, very difficult, TWO, somewhat difficult, THREE, neither difficult nor easy, FOUR, somewhat easy, or FIVE, very easy?

- 1. Very difficult
- 2. Somewhat difficult
- 3. Neither difficult nor easy
- 4. Somewhat easy
- 5. Very easy
- 7. Don't know/not sure
- 9. Refused

C02Q05d

Is there anything that NDOT could do to make the website easier to use?

C02Q06a

I am going to read a list of items. After each item, please indicate with a simple "yes" or "no" whether or not you would be interested in using NDOT's website to obtain more information about that item.

Current construction project information

- 1. Yes
- 2. No
- 7. Don't know/not sure
- 9. Refused

C02Q06b

I am going to read a list of items. After each item, please indicate with a simple "yes" or "no" whether or not you would be interested in using NDOT's website to obtain more information about that item.

Future project planning information

- 1. Yes
- 2. No
- 7. Don't know/not sure

9. Refused

C02Q06c

I am going to read a list of items. After each item, please indicate with a simple "yes" or "no" whether or not you would be interested in using NDOT's website to obtain more information about that item.

Current weather and road condition information

1. Yes
2. No
7. Don't know/not sure
9. Refused

C02Q06d

I am going to read a list of items. After each item, please indicate with a simple "yes" or "no" whether or not you would be interested in using NDOT's website to obtain more information about that item.

Detour or work zone information

1. Yes
2. No
7. Don't know/not sure
9. Refused

C02Q06e

I am going to read a list of items. After each item, please indicate with a simple "yes" or "no" whether or not you would be interested in using NDOT's website to obtain more information about that item.

General information about NDOT

1. Yes
2. No
7. Don't know/not sure
9. Refused

C02Q06f

I am going to read a list of items. After each item, please indicate with a simple "yes" or "no" whether or not you would be interested in using NDOT's website to obtain more information about that item.

A specific question or concern you may have

1. Yes

- 2. No
- 7. Don't know/not sure
- 9. Refused

C02Q06g

I am going to read a list of items. After each item, please indicate with a simple "yes" or "no" whether or not you would be interested in using NDOT's website to obtain more information about that item.

Is there anything else that you would like to see on NDOT's website that was not already mentioned? (specify)

- 1. Yes
- 2. No
- 7. Don't know/not sure
- 9. Refused

C02Q07

How dissatisfied or satisfied are you with NDOT's overall efforts to keep residents informed about transportation-related issues in Nevada? Would you say you are ONE, very dissatisfied, TWO, somewhat dissatisfied, THREE, neither dissatisfied nor satisfied, FOUR, somewhat satisfied, or FIVE, very satisfied?

- 1. Very dissatisfied
- 2. Somewhat dissatisfied
- 3. Neither dissatisfied nor satisfied
- 4. Somewhat satisfied
- 5. Very satisfied
- 7. Don't know/not sure
- 9. Refused

C02Q08

What is ONE thing NDOT can do to improve its level of customer service?

Section 3 - Congestion

C03Q01

The previous questions asked about your most frequently traveled highway. The next questions ask about ANY Nevada street or highway you travel on in your city or town.

What do you feel is the biggest contributor to delayed travel times on Nevada Roadways? Please allow me to read the entire list of options before answering and choose only one response.

- 1. Poor signal timing on local roads
- 2. Not enough travel lanes to accommodate traffic

3. Construction
4. Winter or stormy weather
5. Accidents on the roadways
6. Other (specify)
7. Don't know/not sure
9. Refused

Section 4A - Truck Driver Questions

C04Q01

Are you a truck driver or a professional long-distance driver?

NOTE: If person asks for the meaning of professional long-distance driver, say: "someone who drives long distances on a regular basis and is paid for their work"

NOTE: If person asks what long distance is, say: "whatever it means to you"

1. Yes
2. No [goto C04Q03]
7. Don't know/not sure [goto C04Q03]
9. Refused [goto C04Q03]

C04Q02

The next set of questions will ask you about your experience as a truck driver or a professional long-distance driver in Nevada.

Approximately how many days PER WEEK do you travel on Nevada State Highways?

- Enter number days
88. None
77. Don't know/not sure
99. Refused

Section 4B - Rest Area Questions

C04Q03

Have you used any NEVADA Highway Rest Areas in THE PAST YEAR?

1. Yes [goto C04Q05]
2. No
7. Don't know/not sure [goto C05Q01]
9. Refused [goto C05Q01]

NOTE: Include answers such as "too crowded"

1. Yes
2. No
7. Don't know/not sure
9. Refused

C04Q04e

I am going to read a list of reasons why you may NOT have used NEVADA State Highway Rest Areas in the past year. After each item, please indicate with simple "yes" or "no" whether or not the reason explains why you have not used Nevada Highway Rest Areas.

There were no rest areas along my route

1. Yes
2. No
7. Don't know/not sure
9. Refused

C04Q04f

I am going to read a list of reasons why you may NOT have used NEVADA State Highway Rest Areas in the past year. After each item, please indicate with simple "yes" or "no" whether or not the reason explains why you have not used Nevada Highway Rest Areas.

Facilities are not clean or well kept. This includes vandalism and graffiti.

1. Yes
2. No
7. Don't know/not sure
9. Refused

C04Q04g

I am going to read a list of reasons why you may NOT have used NEVADA State Highway Rest Areas in the past year. After each item, please indicate with simple "yes" or "no" whether or not the reason explains why you have not used Nevada Highway Rest Areas.

Are there any other reasons why you have not used highway rest areas that I didn't mention?
(specify)

1. Yes
2. No
7. Don't know/not sure
9. Refused

[[goto C05Q01](#)]

C04Q04a

I am going to read a list of reasons why you may NOT have used NEVADA State Highway Rest Areas in the past year. After each item, please indicate with simple "yes" or "no" whether or not the reason explains why you have not used Nevada Highway Rest Areas.

I prefer to stop where food or gas can be purchased

1. Yes
2. No
7. Don't know/not sure
9. Refused

[if C04Q01 ≠ 1 goto C04Q04c]

C04Q04b

I am going to read a list of reasons why you may NOT have used NEVADA State Highway Rest Areas in the past year. After each item, please indicate with simple "yes" or "no" whether or not the reason explains why you have not used Nevada Highway Rest Areas.

My main truck route is in another state

1. Yes
2. No
7. Don't know/not sure
9. Refused

C04Q04c

I am going to read a list of reasons why you may NOT have used NEVADA State Highway Rest Areas in the past year. After each item, please indicate with simple "yes" or "no" whether or not the reason explains why you have not used Nevada Highway Rest Areas.

I didn't feel safe

NOTE: Include answers such as not well-lit, not enough lighting

1. Yes
2. No
7. Don't know/not sure
9. Refused

C04Q04d

I am going to read a list of reasons why you may NOT have used NEVADA State Highway Rest Areas in the past year. After each item, please indicate with simple "yes" or "no" whether or not the reason explains why you have not used Nevada Highway Rest Areas.

There were too many trucks or cars at the rest areas

C04Q05

Within the past year, what has your level of dissatisfaction or satisfaction been with NEVADA Highway Rest Areas? Would you say you were ONE, very dissatisfied, TWO, somewhat dissatisfied, THREE, neither dissatisfied nor satisfied, FOUR, somewhat satisfied, or FIVE, very satisfied?

1. Very dissatisfied
2. Somewhat dissatisfied
3. Neither dissatisfied nor satisfied [goto C05Q01]
4. Somewhat satisfied [goto C05Q01]
5. Very satisfied [goto C05Q01]
7. Don't know/not sure [goto C05Q01]
9. Refused [goto C05Q01]

C04Q06

What is the MAIN reason why were you not satisfied with the Highway Rest Areas? Please allow me to read all options before answering, and choose only ONE response.

NOTE: For option 3, include answers such as not well-lit, not enough lighting

1. They are too crowded or there are too many trucks and cars
2. The rest areas were unclean (this includes vandalism and graffiti)
3. They didn't seem safe
4. Other (specify)
7. Don't know/not sure
9. Refused

Section 5 - Demographics

C05Q01

And the last question is...

What is your age?

- _____ Enter age in years
7. Don't know/not sure
9. Refused

Closing

Everyone's answers will be combined to give us information about public perceptions and attitudes concerning customer service and maintenance of highways in the State of Nevada. Thank you very much for your time and cooperation. [end interview]

Appendix C:

Website Information

about Study

Center for Research Design and Analysis
The University of Nevada Reno **CRDA**

• Home **Nevada Department of Transportation Maintenance Study**

Frequently Asked Questions:

- What is the NDOT Maintenance survey about?
NDOT is interested in your opinions about how well they are doing maintaining NDOT roadways and highways in your county and how they are doing with respect to their customer service. Your opinions are very important as NDOT would like to improve their services based on the information they receive from the Nevada public.
- How long is it?
It takes about 10 minutes depending on your answers.
- How will this help?
Your answers will be combined with others and given to NDOT to help them improve their maintenance service and customer service in Nevada, particularly in your county.
- Who is in charge of the project?
CRDA (Center for Research Design and Analysis) is conducting this study on behalf of NDOT (Nevada Department of Transportation).
- What kinds of questions will you ask?
The survey is a combination of open and close ended questions, which assess client satisfaction with NDOT services. No identifying information will be collected.
- Who are you conducting the survey for?
The study is being conducted for NDOT (Nevada Department of Transportation).
- Who is funding the project?
This project is funded by NDOT (Nevada Department of Transportation).
- How can I verify that?
You may contact:

Bill Hoffman
Chief Maintenance & Operations Engineer
Nevada Dept. of Transportation
1263 S. Stewart St. Carson City, NV 89712
(775) 888-7050
- How will these data be used?
Your answers will be combined with others and given to NDOT to help them improve their maintenance service and customer service in Nevada, particularly in your county.

- Will the results be published?
The results will be disseminated through the Nevada Department of Transportation. The results will not be publicly published.
- Where did you get my name and phone number?
We use a system called random digit dialing (RDD) in which the computer randomly chooses the last four digits of your phone number, so we don't know your name or anything confidential about you.
- Why are you asking me to participate in this study?
You are being invited to participate in this research project because you are a resident and taxpayer in Nevada.
- How did you pick me?
We use a system called Random Digit Dialing in where the computer randomly chooses the last 4 digits of your phone number. You were randomly chosen from the adult members of your household so that we can get an equal representation from all Nevada residents. Your opinion is important in order for us to improve Nevada Roads.
- Will it be possible to identify me by inference?
All the information you provide us will only be used in summary or aggregate form. No individual responses will be reported.
- Who will see my name or have access to my responses?
Survey data, code sheets, and identifying information will be stored separately in secure file cabinets for five years. Access to the data will be restricted to project personnel at the Center for Research Design and Analysis, and the Nevada Department of Transportation. CRDA and NDOT will not be able to identify your personal responses.

About CRDA

The Center for Research Design and Analysis (CRDA) is an academically-based, multidisciplinary research institute under the Vice President of Research at the University of Nevada, Reno. The institution, that was formerly known as Senator Alan Bible Center for Applied Research (SABCAR) and is now known as the Center for Research Design and Analysis (CRDA) was originally established in 1959 as the Bureau of Governmental Research. The Center's mission is to provide the most valid and reliable data possible across a broad spectrum of data collection protocols and analysis activities. Since 1959 we have completed hundreds of random digit dial survey research projects ranging from sample sizes of 600 to 6000+ interviews.

CRDA utilizes a wide range of data collection techniques for telephone, mail, and internet surveys. These techniques include a state-of-the-art computer-assisted telephone interview (CATI) system and computer-assisted personal interview (CAPI) systems. In addition, the center uses TELEFORM, a sophisticated questionnaire design software used to fully automate large scale questionnaire mail-out projects. The Center's staff provide expertise in survey research, psychometrics, univariate and multivariate statistical analysis, research design, sampling, mathematical modeling, and program evaluation. Many of the Center's research projects are aimed at solving problems and providing data and information to state and federal agencies for use in program planning and resource allocation. The Center also provides in-house research support to

Nevada Department of Transportation
2009 Customer Satisfaction Survey

faculty, students, and community-based groups. Over the past ten years the Center has attracted in excess of \$5 million in external grants and contracts.

Appendix E: NDOT District Map

Appendix F: Highway or Road Options Provided to Respondents by District

DISTRICT 1: Clark County:

***I-215 was not asked**

I-15

US 95 (a section of 95 is also I-515 and US 93)

SR 160 (Blue Diamond Road)

DISTRICT 1: SOUTHERN RURALS Esmeralda (Goldfield), Nye (Tonopah, Beatty, Gabbs, Scotty's Junction), Lincoln (Pioche, Panaca, Caliente, Ash Springs, Rachel, Hiko)

US 95

US 93

SR 160 (Blue Diamond Road)

US 6

DISTRICT 2: Washoe County (cities: Reno, Sparks)

SR 445 (Pyramid Highway)

SR 431 (Mt. Rose Highway)

I-80

US 395

DISTRICT 2: NORTHWEST RURALS (cities: Fernley, Fallon, Carson, Gardnerville, Minden, Douglas, Lovelock, Hawthorne, Virginia City) Counties: Carson City, Churchill, Douglas, Lyon, Pershing, Mineral, Storey

US 95

US 6

US 395

SR 341 (Geiger Grade)

US 95A (Fernley/SilverSprings/Yerington)

US 50

DISTRICT 3: Elko County (Spring Creek, Carlin, Wells, West Wendover); and Humboldt (Winnemucca); Lander (Battle Mountain, Austin); Eureka (Eureka); White Pine (Ely, Ruth, Lund, Baker)

US 93

I-80

US 50

State Route 227 (Lamoille Highway)

State Route 225 (Mountain City Highway)

SR 305 (Austin/Battle Mountain Road)

SR 278 (Eureka/Carlin Road)

SR 140 (Denio/Adel Oregon Road)

Appendix G:

Open-Ended

Responses

Q: C02Q05D-Is there anything NDOT could do to make the website easier to use?

Update Website Regularly

- update it frequently (weather, repairs, road conditions)
- map of emergency incidents

Make it More User Friendly

- make the site page not so complex
- some of their reports are difficult to find
- more point and click
- easier navigation
- some older folks might find small font problematic
- so much information that it is almost confusing; divide the information into more pages
- need to improve the usability
- needs to be streamlined
- more colors
- make it more user friendly, be able to choose the area
- better menus (clearer)
- quicker hot links

Better Contact Information

- make contact information more widely disseminated, not advertised well at all
- directory for contacts isn't clear

Better Communication via Website about Specific Roads and Highways

- create links to information about specific roads and highways
- a link to the road conditions on the home page
- road construction and closed traffic lanes through emails sent to people subscribed on website
- improve the website for road conditions; they [NDOT] just put mile markers and nobody knows where the mile markers are so it doesn't really help
- make it where you can select the Highway number
- more specific to all the towns that are in Nevada that the highways run through
- a map of directions for the roads

Other

- consider all questions above [in the survey] and improve on it
- look at what Oregon has
- go back three years

Q: C01Q09-What is ONE thing NDOT can do to improve its highway maintenance services?

Maintaining Roadway Surface

- fix the potholes
- make sure roads are flat, bring up material up at the end of the road so it won't break
- reflectors along road need to be replaced
- maintain road resurfacing to prevent potholes and uneven roadways
- old highway so improve patching and grinding, filing, and chipping
- smooth out pavement
- keeping the surface of the roads mended
- more timely maintenance
- they should get better quality and make tighter standards on the roads

Maintaining Surface Lines

- clear lines
- make the pedestrian crosswalks more visible
- make sure the lane lines are visible so you know where the curbing begins and when to turn, especially at night
- work more on lane lines make them clearer
- paint the lines on the highway
- to make sure to maintain travel lane lines
- reflective paint when raining for the lane lines
- maintain the lane lines a little better
- use a better grade of paint on the highway surfaces
- when it rains make the lines more visible
- make sure that the lane lines are always painted and visible

Garbage Removal

- more cleanup crews
- remove litter and garbage
- have somebody travel the well traveled areas
- make sure there is not debris on the road
- trash and debris such as tire pieces and other hazards in the road
- removal of carcasses and debris on the road
- find small stones or gravel annoying on highways, clean up debris not necessarily trash
- all the litter and garbage is pretty bad; piled up against the off ramp walls and fences
- what about the issue of poor design; when it rains the litter washes up on the bike lanes
- lots of nails and people are getting a lot of flat tires
- keep them clean, swept

Snow and Ice Removal

- quicker response to snow removal
- instead of using rocks on road for snow can use other material that wont chip windows
- start removing ice and snow faster
- more snow trucks
- get to little towns as early as they can when it snows
- snow removal on the off ramps
- probably get the snow trucks out sooner
- plow at earlier times
- plow more often

Landscaping

- they could dress up the interchanges, the grass is old and yucky
- plant greenery alongside and keep them clean
- Improve landscaping, a lot of weed growth
- beautification
- the rocks they're putting along the road for landscaping are dangerous
- it would be nice to see more landscaping
- making the highway landscaping more pleasant instead of sagebrush
- more landscaping to reduce dust hazards
- cutting the brushes and willows back further because the animals can easily get into the roadway because the willows are so close to the roadway
- a lot of times there are trees falling on the road, so those need to be kept clear on windy days

Graffiti

- graffiti removal
- keep up on the graffiti

Congestion: Construction of New Lanes

- make a bypass around Boulder City going to the new bridge
- continue to add lanes to help with traffic
- more passing lanes and guard rails for safety reasons
- add left turn lanes
- widen freeways
- add more lanes to freeway
- more pull over lanes for disabled vehicles to be out of the way
- widen the roads due excessive traffic
- build a freeway
- build more roads

Congestion: Poor Signal Timing/More Signs

- put in more traffic lights
- improve the timing of the street lights
- more signs
- could improve the road signs, there aren't many that could be improved upon, advanced notice of exits
- maintaining the signs
- stop light instead of roundabout
- more yield signs; the flow of traffic at certain times of day on freeway is source of frustration
- traffic lights along the freeway go out or won't turn on sometimes

Congestion: Construction Causing Traffic

- there are construction problems each month, so speed up the maintenance, always working during peak hours and times of the year, inconveniencing the travelers
- construction cone confusion
- not to do road work on a lot of the same parallel roads at the same time because it's hard to get around construction
- construction makes everything really congested; there are cones on the highway, but then there is no construction going on; the lanes are way open and it makes congestion really bad; understand congestion but they are not appropriately utilizing their space when there is nothing going on and traffic is backed up
- make repairs in an orderly fashion; such as when they close off lanes in one of the highways to do construction but then also close off lanes to do construction in the alternate route, so either way will be slowed down

Congestion: Construction Causing Traffic, continued

- make the construction sites safer; they are poor to the point they are dangerous
- when they're doing construction, the way they mark the road is difficult to follow; hard to tell where you're supposed to go at times
- when they have all those barrels out and there's like 20 miles before you get to a construction zone, you're going through barrels and there's nothing going on
- when construction is being performed a lot of the time they block off too much of the road which wastes people's time who are driving past construction; they should only block off the parts of the road that they need to have blocked off
- when they are planning to do construction they should let more people know when it is going to happen instead of just putting up a sign about a mile before you hit the construction which still leaves you unprepared
- work faster on the construction projects
- flow of construction
- make sure that detours are clearly marked when doing construction
- when under constructions make more signs and let people know before
- work at nighttime, traffic during day

Other:

- better engineering of what they build in the first place
- select roadway contractors for performance rather than low cost
- respond to problems more quickly
- get more money would allow them to do better
- get it done faster-repairs
- more emergency sideways for flat tires and emergency use
- get mass transportation, like trains
- stop tearing it up right after they put it in; I would say better forward planning
- solicit public opinion more frequently
- not put in roundabout and put in stop light instead
- more work on the back roads that aren't freeways
- sell some of their loaders and fix the road
- force supervisors to put more into crews
- the approaches need to be improved
- maximize safety measures
- improve access onto and off of the interstate
- more railings

Other, continued

- plan their on and off ramps better because they are too short
- shoulder work might be a good idea; some places the shoulders are roundish and if it could be more level that would be better
- better planning of the roads, some roads just end
- the emergency vehicles are a great thing
- driver assistance, help with things like flat tire on the road
- need to hire more people, labor is the key; the more people they have the more work they can do on the roads
- quit mag chloride
- some of the off ramps need better lighting
- better planning, includes financial
- more proactive
- give out the jobs to private contractors
- maintain the signs around the highway
- stay on the contractor doing the pavement on the freeways
- there are too many barriers when they are not doing work, like barrels, etc.
