To The Users Of This Directory:

The purpose of this publication is to provide general information for VFR flying that may be useful to a pilot in planning a flight or in communicating with a particular airport. It is not intended to be relied upon as a completely accurate depiction of existing airport conditions. Aeronautical information contained in this directory is current as of the latest airport inspection before publication. The data is obtained from the Federal Aviation Administration (FAA) and the Nevada Department of Transportation (NDOT) Aviation Planning Section. The FAA and NDOT make no warranty, expressed or implied for the accuracy thereof. Always fly with the appropriate NOTAMS, Airman's Advisories, and flight information publications. Check with airport management for supplemental data and current information. This directory is not to be used for navigation.

About Us:

Established and incorporated in the Nevada Department of Transportation Planning Division, the Aviation Planning Section is responsible for helping ensure that Nevada's general aviation public and private use airports meet applicable safety requirements and provide maximum utility to their communities and the flying public. Through annual safety inspections and education programs, the NDOT Aviation Planning Section facilitates the establishment of a viable, balanced and integrated system of aviation facilities. NDOT also prepares and administers the State Airport Systems Plan. This plan identifies the aeronautical role of existing and recommended airports. It provides a comprehensive planning framework, consistent with state goals and objectives for economic development, transportation, land use, and the environment. It incorporates metropolitan regional airport system planning and provides direction for airport master planning. The State Airport Systems Plan also serves as the Nevada component of the FAA's National Plan of Integrated Airport Systems.

THE KOCH CHART FOR ALTITUDE AND TEMPERATURE EFFECTS

This chart indicates typical representative values for "personal" airplanes. For exact values consult your airplane flight manual. The chart may be conservative for airplanes with supercharged engines. Also remember that long grass, sand, mud or deep snow can easily double your take-off distance.

IN-FLIGHT INTERCEPT PROCEDURES

<p>If you are intercepted by a U.S. Military or law enforcement aircraft, immediately:</p> <ol style="list-style-type: none"> 1. Follow the instructions given by the intercepting aircraft. <i>(See chart at right.)</i> 2. Notify ATC, if possible. 3. Attempt to communicate with ATC on the emergency frequency 121.5 MHz, giving the identity and position of your aircraft and the nature of the flight. 4. If equipped with a transponder, squawk 7700, unless otherwise instructed by ATC. If any instructions received by radio from any sources conflict with those given by the intercepting aircraft by visual or radio signals, request clarification while continuing to comply with the instructions given by the intercepting aircraft. 	<p>Intercepting aircraft signal</p> <p>Rocks wings. After acknowledgement initiates a slow level turn, normally to the left, into the desired heading. (Also, at night flash the navigational lights.)</p>	<p>Meaning</p> <p>You have been intercepted.</p>	<p>Intercepted aircraft response</p> <p>Rocks wings and follows. (Also, at night flash navigational lights.)</p>	<p>Meaning</p> <p>I understand and will comply.</p>
	<p>Performs an abrupt breakaway maneuver consisting of a climbing 90 degree turn, or more, without crossing the intercepted aircraft's flight path.</p>	<p>You may proceed.</p>	<p>Rocks wings.</p>	<p>I understand and will comply.</p>
	<p>Circles airport, lowers landing gear, and overflies runway in the direction of landing. (Also, at night turn the landing lights on.)</p>	<p>Land at this airport.</p>	<p>Lowers landing gear, follows the intercepting aircraft and lands if the runway is considered safe (Also, at night turn the landing lights on.)</p>	<p>I understand and will comply.</p>

Compliments of the AOPA Air Safety Foundation • 800-638-3101 • www.aopa.org/asf

Intercepted aircraft signal	Meaning	Intercepting aircraft response	Meaning
Raises landing gear while flying over runway between 1,000' and 2,000', and continues to circle the airport.	This airport is inadequate.	If the intercepted aircraft is requested to go to an alternate airport, the intercepting aircraft raises its landing gear and uses the intercept procedures.	Understood, follow me.
(At night, the pilot of the intercepted aircraft will also flash landing lights while passing over the runway.)		To release the intercepted aircraft, the intercepting aircraft will perform the breakaway maneuver.	Understood, you may proceed.
The pilot switches on and off all available lights at regular intervals.	Cannot comply.	Performs the breakaway maneuver.	Understood.
The pilot switches on and off all available lights at irregular intervals.	In distress.	Performs the breakaway maneuver.	Understood.

For information on AOPA or AOPA's Legal Service Plan, call 800-USA-AOPA (872-2672) or visit www.aopa.org/legalservices.html

2014-2015

AOPA's Airspace Guide

Class B Airspace

Ref. AIM 3-2-3 and FAR 91.131

Description

- Surrounds certain large airports
- Within each Class B airspace area, there are multiple segments with different ceiling/floor altitudes.
 - Example: 70/30 = ceiling 7,000 msl, floor 3,000 msl

Requirements/Limitations

- ATC clearance
- Establish and maintain two-way communication prior to entering
- Mode C transponder (within 30 nm, up to 10,000 msl)
- Visibility: Three statute miles
- Cloud clearance: Clear of clouds
- Student pilot operations restricted

Question: What if the controller puts you on a heading that will take you into the airspace, but doesn't actually tell you that you're cleared into the airspace?

Answer: You need to hear the words "cleared into the Class B airspace," or equivalent. If you don't, be sure to ask the controller before you enter the airspace.

© AOPA Air Safety Foundation
www.asf.org

Class C Airspace

Ref. AIM 3-2-4 and FAR 91.130

Description

- Surrounds certain medium-sized airports
- Typically 20 nm in diameter
- Generally includes two segments with different floor/ceiling altitudes
- Usually extends to 4,000 agl

Requirements/Limitations

- Establish and maintain two-way communication prior to entering
- Mode C transponder
- Visibility: Three statute miles
- Cloud clearance:
 - 500 feet below
 - 1,000 feet above
 - 2,000 feet horizontal

Question: You're departing from a small nontowered field three miles from the primary airport in Class C airspace. Are you required to contact ATC prior to takeoff?

Answer: Follow any procedures specified in the Airport/Facility Directory: In many cases, you may be able to contact ATC from the ground. Generally, however, you are only required to contact ATC as soon as practical after departure.

© AOPA Air Safety Foundation
www.asf.org

Class D Airspace

Ref. AIM 3-2-5 and FAR 91.129

Description

- Surrounds smaller towered airports
- Typically 10 nm in diameter
- Ceiling generally 2,500 agl
- Usually reverts to a Class E surface area when the tower is closed
- May include Class E surface area extensions

Requirements/Limitations

- Establish and maintain two-way communication
- Visibility: Three statute miles
- Cloud clearance:
 - 500 feet below
 - 1,000 feet above
 - 2,000 feet horizontal

Question: Is there a speed limit within Class D airspace?

Answer: Yes. Below 2,500 agl and within four nautical miles of the primary airport, aircraft are limited to 200 knots indicated airspeed.

© AOPA Air Safety Foundation
www.asf.org

Class E Airspace, Transition Area (700 AGL)

Ref. AIM 3-2-6(e)(3)

Description

- Surrounds many nontowered airports
- Extends Class E airspace downward to accommodate IFR arrivals

Requirements/Limitations

- Visibility: Three statute miles*
 - Cloud clearance*:
 - 500 feet below
 - 1,000 feet above
 - 2,000 feet horizontal
- (*Below 10,000 msl)

Question: What is the purpose of a Class E transition area?

Answer: Class E transition areas exist to help traffic transition to or from the terminal or en route environment.

© AOPA Air Safety Foundation
www.asf.org

Class E Airspace, Surface Area

Ref. AIM 3-2-6(e)(1) and FAR 91.127

Description

- Around some airports, Class E airspace begins at the surface, rather than the normal 700 or 1,200 agl
- Class D airports with part-time towers usually become Class E surface areas when the tower is not in operation

Requirements/Limitations

- Visibility: Three statute miles*
 - Cloud clearance*:
 - 500 feet below
 - 1,000 feet above
 - 2,000 feet horizontal
- (* Below 10,000 msl)

Question: What determines whether the airspace around an airport may be designated a Class E surface area?

Answer: The airport must have either a weather observer or a functional automated weather observing system (AWOS or ASOS).

© AOPA Air Safety Foundation
www.asf.org

TRSA (Terminal Radar Service Area)

Ref. AIM 3-5-6 and 4-1-17

Description

- Surrounds Class D airports with expanded ATC radar services

Requirements/Limitations

- Transponder and two-way communication for participating aircraft
- Pilots not required to participate
- Rules for Class D airspace within apply regardless of pilot participation with TRSA radar services

Question: Where do TRSAs fit in the national airspace classification system?

Answer: TRSAs are “leftovers” from the previous (pre-1993) airspace classification system. As a general rule, they exist at airports whose traffic load requires enhanced radar service, but that aren’t busy enough to justify Class C airspace.

© AOPA Air Safety Foundation
www.asf.org

NSA (National Security Area)

Ref. AIM 3-5-7

Description

- Established around areas requiring special security precautions

Requirements/Limitations

- Pilots are requested to avoid flight below a specified altitude within the NSA
- Flight may be temporarily restricted or prohibited by notam

Question: Where might you expect to find an NSA?

Answer: NSAs can be established where a need for greater security exists, but are most often seen around government/military installations, power plants, and factories.

© AOPA Air Safety Foundation
www.asf.org

MOA (Military Operations Area)

Ref. AIM 3-4-5

Description

- Established to allow military training activities

Requirements/Limitations

- VFR pilots may fly through active MOAs, but are advised to exercise extreme caution
- It's a good idea to check with the controlling ATC facility (noted on sectional charts) for MOA status prior to entering an MOA

Question: What kinds of military flight operations take place within MOAs?

Answer: High-speed flight, aerobatic maneuvers, and low-level flight can all be expected. In certain MOAs, "lights out" night training is also permitted.

For more information, view ASF's Mission: Possible online course at www.aopa.org/asf/online_courses.

© AOPA Air Safety Foundation
www.asf.org

Alert Area

Ref. AIM 3-4-6

Description

- Established in areas with a high volume of pilot training or unusual type of aerial activity

Requirements/Limitations

- Pilots advised to be particularly vigilant in scanning for traffic

Question: Do I need to contact ATC prior to entering an Alert Area?

Answer: No ATC contact/clearance is required to enter an Alert Area.

For more information, view ASF's Mission: Possible online course at www.aopa.org/asf/online_courses.

© AOPA Air Safety Foundation
www.asf.org

Prohibited Area

Ref. AIM 3-4-2

Description

- Established for security reasons
 - Examples: Camp David (P-40), Crawford, TX (P-49)

Requirements/Limitations

- Flight within a Prohibited Area is not permitted

Question: How much distance should I maintain from Prohibited Areas?

Answer: It's a good idea to steer well clear of Prohibited Areas. Allow at least a couple of miles to account for navigation error and variances between GPS and ATC radar positions.

For more information, view ASF's Mission: Possible online course at www.aopa.org/asf/online_courses.

© AOPA Air Safety Foundation
www.asf.org

Restricted Area

Ref. AIM 3-4-3

Description

- Separates civilian traffic from potentially hazardous military activities

Requirements/Limitations

- Flight through an active Restricted Area is not permitted
- Check with the controlling ATC facility (noted on sectional charts) for current status prior to entering

Question: May you legally fly through an inactive Restricted Area?

Answer: Yes, but you should be certain to contact the controlling ATC facility for current status before entering the airspace.

For more information, view ASF's Mission: Possible online course at www.aopa.org/asf/online_courses.

© AOPA Air Safety Foundation
www.asf.org

SFAR Area

(Special Federal Aviation Regulations)

Description

- Depicts airspace subject to special regulation
- Examples: Grand Canyon; Washington, D.C. FRZ

Requirements/Limitations

- As specified by SFAR
- For operating rules refer to the chart legend, or the SFAR section at the beginning of FAR Part 91

Question: What kinds of procedures exist for flying within SFAR areas?

Answer: Procedures vary. In the Grand Canyon, for example, special transition routes and altitude rules apply.

© AOPA Air Safety Foundation
www.asf.org

TFR (Temporary Flight Restriction)

Ref. AIM 3-5-3

Description

- Most TFRs are not charted, although some longer-term TFRs are

Requirements/Limitations

- As specified by notam

Question: How much notice is given prior to the establishment of a TFR?

Answer: In many cases, TFRs are established with little or no notice. Get a thorough Flight Service or DUATS briefing just prior to flight and call for updates when airborne. AOPA members can use the Real-Time Flight Planner to plan routes around current and upcoming TFRs.

Download the Real Time Flight Planner from AOPA's web site at www.aopa.org/flight_planner/intro.html.

© AOPA Air Safety Foundation
www.asf.org

Contiguous U.S. ADIZ (Air Defense Identification Zone)

Ref. AIM 5-6-1

Description

- Surrounds the nation's eastern, southern, and western borders

Requirements/Limitations

- IFR or DVFR (Defense VFR) flight plan
- Discrete transponder code
- DVFR aircraft must make position reports prior to entering

Question: What is a DVFR flight plan, and why is one required for VFR aircraft that enter the Contiguous U.S. ADIZ?

Answer: A normal VFR flight plan is not transmitted to ATC: It exists for search-and-rescue purposes only. A DVFR (Defense VFR) flight plan is transmitted to ATC, letting controllers know that the aircraft will be approaching the ADIZ under VFR.

© AOPA Air Safety Foundation
www.asf.org

Special Conservation Area

Ref. AIM 7-4-6

Description

- Surrounds many national parks, wildlife refuges, etc.

Requirements/Limitations

- Pilots requested to avoid flight below 2,000 agl in these areas

Question: Is it legal to operate below 2,000 agl within a Special Conservation Area?

Answer: Yes. The minimum altitude is voluntary, though we urge pilots to be “good neighbors” and comply with the request.

© AOPA Air Safety Foundation
www.asf.org

Warning Area

Ref. AIM 3-4-4

Description

- Extends outward from 3 nm off the coast
- Warns pilots of potentially hazardous activities

Requirements/Limitations

- VFR flight through active Warning Areas is permitted, though not recommended

Question: Are you required to contact ATC before entering a Warning Area?

Answer: No, but it is a good idea to contact the controlling ATC facility for status information prior to entry. Active Warning Areas can be dangerous to general aviation aircraft.

For more information, view ASF's Mission: Possible online course at www.aopa.org/asf/online_courses.

© AOPA Air Safety Foundation
www.asf.org

VFR Flyways

Ref. AIM 3-5-5

Description

- Helps transition VFR traffic into, out of, through, or near Class B airspace
- ATC clearance not required

Requirements/Limitations

- Mode C transponder
- Pilot must still comply with requirements for other airspace entered
- Depicted on the back of terminal area charts

Question: Will a VFR flyway take you into Class B airspace?

Answer: No. VFR flyways are general paths used by pilots flying into, out of, through, or near terminal airspace to avoid Class B airspace. Remember, though, that they may take you through other areas with their own requirements (Class D airspace, for example).

© AOPA Air Safety Foundation
www.asf.org

VFR Transition Routes

Ref. AIM 3-5-5

Description

- Used by ATC to route VFR traffic through Class B airspace
- Depicted on terminal area charts

Requirements/Limitations

- ATC Clearance
- Mode C transponder
- Adherence to published route and ATC instructions

Question: How do I ask ATC permission if I want to use a VFR transition route?

Answer: On initial contact, you'll want to notify ATC of your position, altitude, route name desired, and direction of flight.

© AOPA Air Safety Foundation
www.asf.org

Differentiates Floors of Class E Airspace

Ref: NACO Chart User's Guide

Description

- Differentiates floors of airspace greater than 700 feet above the surface
- When the ceiling is less than 18,000 msl, the value, prefixed by the word "ceiling," will be shown along the limits of the airspace boundaries

Requirements/Limitations

- Not Applicable

Question: Where am I likely to encounter differences in Class E airspace depicted by this symbol?

Answer: Typically in areas of high terrain, like the Grand Canyon, for example, and off the east and west coasts of the United States.

© AOPA Air Safety Foundation
www.asf.org

IFR Routes

Ref: NACO Chart User's Guide

Description

- Only depicted on VFR terminal area charts
- Shows arrival and departure routes and altitudes of IFR traffic into and out of the terminal area of Class B airspace

Requirements/Limitations

- Not applicable

Question: I'm a VFR pilot, so why do I need to know about IFR routes?

Answer: The IFR routes depicted on the VFR terminal area charts should alert VFR pilots operating in terminal areas of arriving or departing IFR traffic. Maintain extra vigilance when flying through or near these routes.

© AOPA Air Safety Foundation
www.asf.org

Mode C veil

Ref: AIM 3-2-3

Description

- Mode C veils exist within 30 nm of most Class B airports. (A list of these airports is available in FAR 91, Appendix D, Section 1)
- Some Class B airspaces extend beyond the Mode C veil

Requirements/Limitations

- Mode C transponder
- Certain exemptions apply. Refer to FAR 91.215

Question: My airport is based within a Mode C veil. If my transponder fails while outside the veil, can I get back in?

Answer: When flying into a Mode C veil area with an inoperative transponder, the pilot needs to telephone the appropriate ATC facility having jurisdiction over the concerned airspace and request permission at any time to make the flight. Upon agreeing to conditions (including direction of flight and altitude), the pilot will be given a code number that he or she will mention to the controller upon initial radio contact.

© AOPA Air Safety Foundation
www.asf.org

Military Training Routes (MTR)

Ref: AIM 3-5-2

Description

- MTRs prefixed with the letters 'IR' are for IFR flights
- MTRs prefixed with the letters 'VR' are for VFR flights
- MTRs with a letter suffix (i.e., A, B, etc.) denote an alternate route
- MTRs with four numbers denote routes flown at 1,500 agl and below
- MTRs with three numbers denote routes flown above 1,500 agl

Requirements/Limitations

- Not Applicable

Question: What exactly is a military training route?

Answer: A military training route, or MTR, is used by the military for conducting low-altitude, high-speed flight training. Typically the routes above 1,500 agl are flown under IFR, and the routes below 1,500 are flown under VFR. Contact flight service for MTR activity that might affect your route of flight.

For more information, view ASF's Mission: Possible online course at www.aopa.org/asf/online_courses.

www.asf.org

2014-2015

AOPA's Airports Signage & Markings

ILS Critical Area Holding Position Sign:

Hold at this sign on a taxiway when the ILS is in use *and* the weather is less than 800 feet and 2 miles. Aircraft taxiing beyond this point may interfere with the ILS signal to approaching aircraft.

Ref. AIM Para. 2-3-8

© AOPA Air Safety Foundation
www.asf.org

15-APCH

Runway Approach Area Holding Position Sign:

Taxiing past this sign may interfere with operations on the runway. (In this case, aircraft arriving to runway 15 or departing from runway 33.) It is located next to the yellow holding position markings painted on the taxiway pavement.

Ref. AIM Para. 2-3-8

© AOPA Air Safety Foundation
www.asf.org

Runway Boundary Sign:

This sign faces the runway and is visible to pilots exiting the runway. It is located next to the yellow holding position markings painted on the taxiway pavement. Taxi past this sign to be sure you are clear of the runway.

Ref. AIM Para. 2-3-9

© AOPA Air Safety Foundation
www.asf.org

Taxiway Location Sign:

Indicates the taxiway you are on. (May be co-located with direction signs or runway holding position signs, as shown in graphic.)

Ref. AIM Para. 2-3-9

© AOPA Air Safety Foundation
www.asf.org

Runway Holding Position Sign:

Hold here. In this example, the threshold for runway 15 is to your left and the threshold for runway 33 is to your right. This sign is located next to the yellow holding position marking painted on taxiways.

Ref. AIM Para. 2-3-8

© AOPA Air Safety Foundation
www.asf.org

Non-Movement Boundary Area:

The solid side of the line indicates the non-movement area, which is not under ATC control, and the dashed side indicates the movement area, which is under ATC control. This marking can be seen at airports where hangar areas are located adjacent to a taxiway at a tower-controlled airport.

Ref. AC 150/5340-1J

© AOPA Air Safety Foundation
www.asf.org

ILS Critical Area Boundary Sign:

Located next to the ILS holding position markings and is seen by pilots leaving the ILS critical area. When the ILS is in use *and* the weather is less than 800 feet and 2 miles, be sure your aircraft has passed beyond this sign before stopping on the taxiway.

Ref. AIM Para. 2-3-9

© AOPA Air Safety Foundation
www.asf.org

Taxiway Direction:

The yellow direction signs, usually seen next to a taxiway location sign, indicate the direction of intersecting taxiways. In this example, taxiway Charlie is to the left and right, and Alpha takes a turn to the right ahead.

Ref. AIM Para. 2-3-9 and 2-3-10

© AOPA Air Safety Foundation
www.asf.org

No Entry Sign:

Prohibits an aircraft from entering an area, such as a one-way taxiway or at the intersection of a road intended for vehicles.

Ref. AIM Para. 2-3-8

© AOPA Air Safety Foundation
www.asf.org

Runway Holding Position Markings:

This marking is found on taxiways at runway intersections and indicates where an aircraft is to stop. The solid lines are on the side where the aircraft is to hold and the dashed lines are on the side toward the runway. Do not cross this marking until cleared.

Ref. AIM Para. 2-3-5

© AOPA Air Safety Foundation
www.asf.org

Destination Sign:

Indicates the direction of a taxi route to a runway(s) or other location. In this example, the FBO is ahead and to the right, and runways 27 and 33 are to the immediate right.

Ref. AIM Para. 2-3-11

© AOPA Air Safety Foundation
www.asf.org

Runway Location Sign:
Identifies the runway on which
your aircraft is located.

Ref. AIM Para. 2-3-9

© AOPA Air Safety Foundation
www.asf.org

Direction Sign for Runway Exit:

Indicates an exit from a runway. Located just prior to the intersection on the same side of the runway as the exit.

Ref. AIM Para. 2-3-10

© AOPA Air Safety Foundation
www.asf.org

Holding Position Marking for ILS:

Indicates the boundary of the ILS critical area. Don't cross when the ILS is in use *and* the weather is less than 800 feet and 2 miles.

Ref. AIM Para. 2-3-5

© AOPA Air Safety Foundation
www.asf.org

Taxiway Ending Marker:
Indicates the taxiway does not continue. Located on the far side of the intersection.

Ref. AC 150/5340-18C

© AOPA Air Safety Foundation
www.asf.org

Closed Runway and Taxiway Marking:

Indicates a closed runway or taxiway. It will also be placed at each entrance of a permanently closed taxiway. A raised-lighted X may be used in lieu of a pavement marking.

Ref. AC 150/5340-1J

© AOPA Air Safety Foundation
www.asf.org

Enhanced Taxiway Centerline Markings:

Used mostly at larger airports, these markings indicate that the aircraft is approaching a runway. One hundred fifty feet prior to a runway holding position marking, the taxiway centerline will be “enhanced” to include an additional set of yellow dashed lines.

Ref. AIM Para. 2-3-4

© AOPA Air Safety Foundation
www.asf.org

Runway Distance Remaining Sign:

Indicates the distance of runway remaining in thousands of feet. In this example, 3,000 feet remain on the landing runway.

Ref. AIM Para. 2-3-13

© AOPA Air Safety Foundation
www.asf.org

Vehicle Roadway Markings:

Used to define a vehicle pathway (non-aircraft) that is on, or crossing, an area also used by aircraft. The outer boundaries will consist of either a single solid white line or white and black “zippered” lines.

Ref. AIM Para. 2-3-6

© AOPA Air Safety Foundation
www.asf.org

Chevron Markings:

Indicates areas of pavement aligned with the runway that are unusable for taxi, takeoff, or landing. Chevrons cover blast pads or stopways, which are constructed to protect areas from erosion caused by jet blasts (blast pad) and to provide extra stopping distance for aircraft (stopways).

Ref. AIM Para. 2-3-3

© AOPA Air Safety Foundation
www.asf.org

Holding Position Markings for Taxiway/Taxiway Intersections:

Indicates an area where aircraft can be held short of a taxiway intersection. If instructed by Air Traffic Control to hold short of a taxiway, the pilot must stop the aircraft before it crosses the taxiway holding lines.

Ref. AIM Para. 2-3-5

© AOPA Air Safety Foundation
www.asf.org

Displaced Threshold:

Indicates the beginning of the available landing runway. The area before the displaced threshold is available for takeoffs (in either direction) and landings (from the opposite direction).

Ref. AIM Para. 2-3-3

© AOPA Air Safety Foundation
www.asf.org

Relocation of a Threshold:
Indicates that the runway threshold has been relocated. Possible causes for threshold relocation include construction or other airport maintenance.

Ref. AIM Para. 2-3-3

© AOPA Air Safety Foundation
www.asf.org
